

#### **UNIVERSITY OF CALICUT**

#### **Abstract**

General & Academic IV - Faculty of Science - Modified Scheme and Syllabus of B.Sc Computer Science Honours Programme with effect from 2024 admission - in tune with the CUFYUGP Regulations 2024, Approved by the Vice Chancellor - Implemented - Orders Issued

#### G & A - IV - J

U.O.No. 8816/2025/Admn

Dated, Calicut University.P.O, 13.06.2025

Read:-1. U.O.No. 9924/2024/Admn dated: 22.06.2024

- 2. U.O Note No. 90727/EX-III-ASST-3/2024/PB dated: 27.07.2024
- 3. Minutes of the Board of Studies in Computer Science and Application (UG) held on 24.05.2025
- 4. Remarks of the Dean, Faculty of Science dated: 09.06.2025
- 5. Orders of the Vice Chancellor in the file of even No. dated: 10.06.2025

#### **ORDER**

- 1. Vide paper read as (1), the Scheme and Syllabus of B.Sc Computer Science Honours Programme in tune with CUFYUGP Regulations 2024, has been implemented with effect from 2024 admission.
- 2. Vide paper read as (2), Pareeksha Bhavan had pointed out certain discrepancies in the syllabus of B.Sc Computer Science Honours programme.
- 3. Accordingly, the Board of Studies in Computer Science and Application (UG), vide paper read as (3), incorporated the corrections pointed out by Pareeksha Bhavan and recommended to approve the modified scheme and syllabus of B.Sc Computer Science Honours programme with effect from 2024 admission, in tune with CUFYUGP Regulations 2024. The Board also recommended to change the name of Vocational minor course (Data Science) in the second semester CSC2VN101 Introduction to data science to "CSC2VN101 Fundamentals of data science" with effect from 2025 admissions.
- 4. The Dean, Faculty of Science, vide paper read as (4), approved the recommendations in the minutes of the meeting of Board of Studies in Computer Science and Application (UG).
- 5. Considering the above, the Vice Chancellor has approved the recommendations in the minutes of the meeting of the Board of Studies in Computer Science and Application (UG) and accorded sanction to implement the modified scheme and syllabus of B.Sc Computer Science Honours programme with effect from 2024 admission, under section 10(13) of Calicut University Act 1975.
- 6. The modified Scheme and Syllabus of B.Sc Computer Science Honours programme in tune with CUFYUGP Regulations 2024, is thus implemented with effect from 2024 admission.
- 7. The U.O vide paper read as (1) stands modified to this extent.
- 8. Orders are issued accordingly. (Syllabus appended)

### UNIVERSITY OF CALICUT

# **B.Sc Computer Science Honours**

# (FOUR YEAR UNDERGRADUATE PROGRAMME CURRICULUM)

# UNDER THE FACULTY OF SCIENCE SYLLABUS

(FOR THE STUDENTS ADMITTED FROM THE ACADEMIC YEAR 2024 – '25 ONWARDS)

**BOARD OF STUDIES IN COMPUTER SCIENCE (UG)** 

THENHIPALAM, CALICUT UNIVERSITY P.O., KERALA, 673635, INDIA

**APRIL 2024** 

### **UNIVERSITY OF CALICUT**

# B.Sc. COMPUTER SCIENCE HONOURS (MAJOR, MINOR AND GENERAL FOUNDATION COURSES)

## **SYLLABUS & MODEL QUESTION PAPERS**

(w.e.f. 2024 admission onwards)

(CUFYUGP Regulations 2024)

## PROGRAMME OUTCOMES (PO):

At the end of the graduate programme at Calicut University, a student would:

Knov	vledge Acquisition:							
PO1	Demonstrate a profound understanding of knowledge trends and their impact on the chosen discipline of study.							
Com	munication, Collaboration, Inclusiveness, and Leadership:							
PO2	Become a team player who drives positive change through effective communication, collaborative acumen, transformative leadership, and a dedication to inclusivity.							
Profe	Professional Skills:							
PO3	Demonstrate professional skills to navigate diverse career paths with confidence and daptability.							
Digita	al Intelligence							
PO4	Demonstrate proficiency in varied digital and technological tools to understand and interact							
PO4	with the digital world, thus effectively processing complex information.							
Scien	tific Awareness and Critical Thinking:							
PO5	Emerge as an innovative problem-solver and impactful mediator, applying scientific							
103	understanding and critical thinking to address challenges and advance sustainable solutions.							
Hum	an Values, Professional Ethics, and Societal and Environmental Responsibility:							
PO6	Become a responsible leader, characterized by an unwavering commitment to human values,							
100	ethical conduct, and a fervent dedication to the well-being of society and the environment.							
Resea	rch, Innovation, and Entrepreneurship:							
	Emerge as a researcher and entrepreneurial leader, forging collaborative partnerships with							
PO7	industry, academia, and communities to contribute enduring solutions for local, regional,							
	and global development.							

### PROGRAMME SPECIFIC OUTCOMES (PSO):

At the end of the BSc Computer Science Honours programme at Calicut University, a student would:

PSO1	Understand the theoretical and mathematical foundations of Computer Science
PSO2	Understand the concepts of system architecture, hardware, software and network configuration
PSO3	Acquire logical thinking and problem-solving skills to find solutions in the software domain
PSO4	Design, analyse and develop code-based solutions for the algorithms
PSO5	Address the industry demands and assimilate technical, logical and ethical skills needed for the industry
PSO6	Adapt to emerging trends and tackle the challenges in the software field.

# MINIMUM CREDIT REQUIREMENTS OF THE DIFFERENT PATHWAYS IN THE THREE-YEAR PROGRAMME IN CUFYUGP

Sl. No	Academic Pathway	Major	Minor/ Other	Foundation Courses	Intern -ship	Total Credits	Example			
•			<b>Disciplines</b> ourse has redits	AEC: 4 MDC: 3 SEC: 3 VAC: 3						
				Each course has 3 credits						
1	Single Major (A)	68 (17 courses)	24 (6 courses)	39 (13 courses)	2	133	Major: Computer Science + six courses in different disciplines in different combinations			
2	Major (A) with Multiple Disciplines (B, C)	68 (17 courses)	12 + 12 $(3 + 3 = 6)$ courses)	39 (13 courses)	2	133	Major: Computer Science + Mathematics and Physics

4	CSC8VN302	Expert Systems and Fuzzy Logic	8	60	4	4	30	70	100

- i. Students in Single Major pathway can choose course/courses from any of the Minor/Vocational Minor groups offered by a discipline other than their Major discipline.
- ii. Students in Major with Multiple Disciplines pathway can choose as one of the multiple disciplines, all the three courses from any one of the Minor/ Vocational Minor groups offered by any discipline, other than their Major discipline. If they choose one of the Minor/ Vocational Minor groups offered by their Major discipline as the first one of the multiple disciplines, then their choice as the second one of the multiple disciplines should be any one of the Minor/ Vocational Minor groups offered by a discipline other than the Major discipline. If the students choose any one of the Minor/ Vocational Minor groups in Computer Science as given above, then the title of the group will be the title of that multiple discipline.
- (iii). Students in Major with Minor pathway can choose all the courses from any two Minor groups offered by any discipline. If the students choose two Minor groups in Computer Science (three courses from foundations of computing and three courses from foundations of data analytics) as given above, then the title of the Minor will be **Computer science**.
- (iv). Students in Major with Vocational Minor pathway can choose all the courses from any two Vocational Minor groups offered by any discipline. If the students choose a Vocational Minor group in Computer Science as given above, then the title of the Vocational Minor will be **Data**Science and AI
- (v). Student who opt minor group 1 should not opt minor group 2 in remaining semesters and vice versa Student who opt minor group 1 should not opt minor group 4 in remaining semesters and vice versa

#### DISTRIBUTION OF GENERAL FOUNDATION COURSES IN COMPUTER SCIENCE

Sem			Total	Hours/			Marks	
ester	Course Code	Course Title	Hour s	Week	Credits	Inter nal	Exter nal	Total

	Total Credits for Three Years							3325

To continue to study Computer Science in semesters 7 and 8, batch B1(A2) needs to earn additional 15 credits in Computer Science to make the total credits of 68. Suppose this condition is achieved, and the student of batch B1(A2) proceeds to the next semesters to study Computer Science. The course structure in semesters 7 and 8 is the same as for pathways 1-4, except that the number of the core and elective courses is in continuation of the number of courses in the two categories completed at the end of semester 6, taking into account the number of courses in Computer Science taken online to earn the additional 15 credits.

# CREDIT DISTRIBUTION FOR BATCH B1(A2) IN PATHWAY 5: DOUBLE MAJOR

Total for Four Years	88 + 12 = 100	12					177

#### **EVALUATION SCHEME**

- 1. The evaluation scheme for each course contains two parts: internal evaluation (about 30%) and external evaluation (about 70%). Each of the Major and Minor courses is of 4-credits. It is evaluated for 100 marks, out of which 30 marks is from internal evaluation and 70 marks, from external evaluation. Each of the General Foundation course is of 3-credits. It is evaluated for 75 marks, out of which 25 marks is from internal evaluation and 50 marks, from external evaluation.
- **2.** The 4-credit courses (Major and Minor courses) are of two types: (i) courses with only theory and (ii) courses with 3-credit theory and 1-credit practical.
  - In 4-credit courses with only theory component, out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 10 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.
  - In 4-credit courses with 3-credit theory and 1-credit practical components, out of the total 5 modules of the syllabus, 4 modules are for theory and the fifth module is for practical. The practical component is internally evaluated for 20 marks. The internal evaluation of the 4 theory modules is for 10 marks.

3. All the 3-credit courses (General Foundational Courses) in Computer Science are with only theory component. Out of the total 5 modules of the syllabus, one open-ended module with 20% content is designed by the faculty member teaching that course, and it is internally evaluated for 5 marks. The internal evaluation of the remaining 4 theory modules is for 20 marks.

Sl. No.	Nature of the Course			Internal Evaluation in Marks (about 30% of the total)		Total Marks
			Open-ended module / Practical	On the other 4 modules	on 4 modules (Marks)	
1	4-credit course	only theory (5 modules)	10	20	70	100
2	4-credit course	Theory (4 modules) + Practical	20	10	70	100
3	3-credit course	only theory (5 modules)	5	20	50	75

#### 1. MAJOR AND MINOR COURSES

#### 1.1. INTERNAL EVALUATION OF THEORY COMPONENT

Sl. No.	Components of Internal	Internal Marks for the Theory Part of a Major / Minor Course of 4-credits					
NO.	Evaluation of Theory Part of a Major / Minor Course	Theory		Theory + Practical			
	Course	4 Theory Modules	Open-ended Module	4 Theory Modules	Practical		
1	Test paper/	10	4	5	-		
	Mid-semester Exam						
2	Seminar/ Viva/ Quiz	6	4	3	-		
3	Assignment	4	2	2	-		
		20	10	10	20*		
Total		30		30			

<sup>\*</sup>Refer the table in section 1.2 for the evaluation of practical component

#### 1.2. EVALUATION OF PRACTICAL COMPONENT

The evaluation of practical component in Major and Minor courses is completely by internal evaluation.

- Continuous evaluation of practical by the teacher-in-charge shall carry a weightage of 50%.
- The end-semester practical examination and viva-voce, and the evaluation of practical records shall be conducted by the teacher in-charge and an internal examiner appointed by the Department Council.
- The process of continuous evaluation of practical courses shall be completed before 10 days from the commencement of the end-semester examination.
- Those who passed in continuous evaluation alone will be permitted to appear for the endsemester examination and viva-voce.

The scheme of continuous evaluation and the end-semester examination and viva-voce of practical component shall be as given below:

Sl. No.	Evaluation of Practical Component	Marks for	Weightage
	of Credit-1 in a Major / Minor Course	Practical	
1	Continuous evaluation of practical/ exercise	10	50%
	performed in practical classes by the students		
2	End-semester examination and viva-voce to be	7	35%
	conducted by teacher-in-charge along with an		
	additional examiner arranged internally by the		
	Department Council		
3	Evaluation of the Practical records submitted for the	3	15%
	end semester viva-voce examination by the teacher-		
	in-charge and additional examiner		
	Total Marks	20	

#### 1.3. EXTERNAL EVALUATION OF THEORY COMPONENT

External evaluation carries 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

#### PATTERN OF QUESTION PAPER FOR MAJOR AND MINOR COURSES

Duration	Tyma	Total No. of	No. of	Marks for	Ceiling
Duration	Type	Questions	Questions to be	Each	of

			Answered	Question	Marks
	Short Answer	10	8 – 10	3	24
2 Hours	Paragraph/ Problem	8	6 – 8	6	36
	Essay	2	1	10	10
				Total Marks	70

#### 2. INTERNSHIP

- All students should undergo Internship of 2-credits during the first six semesters in a firm, industry or organization, or training in labs with faculty and researchers of their own institution or other Higher Educational Institutions (HEIs) or research institutions.
- Internship can be for enhancing the employability of the student or for developing the research aptitude.
- Internship can involve hands-on training on a particular skill/ equipment/ software. It can be a short project on a specific problem or area. Attending seminars or workshops related to an area of learning or skill can be a component of Internship.
- A faculty member/ scientist/ instructor of the respective institution, where the student does the Internship, should be the supervisor of the Internship.

#### 2.1. GUIDELINES FOR INTERNSHIP

- 1. Internship can be in Computer Science or allied disciplines.
- 2. There should be minimum 60 hrs. of engagement from the student in the Internship.
- 3. Summer vacations and other holidays can be used for completing the Internship.
- 4. In BSc. Computer Science Honours programme, institute/ industry visit or study tour is a requirement for the completion of Internship. Visit to minimum one national research institute, research laboratory and place of scientific importance should be part of the study tour. A brief report of the study tour has to be submitted with photos and analysis.
- 5. The students should make regular and detailed entries in to a personal log book through the period of Internship. The log book will be a record of the progress of the Internship and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Internship supervisor should periodically examine and countersign the log book.
- 6. The log book and the typed report must be submitted at the end of the Internship.

7. The institution at which the Internship will be carried out should be prior-approved by the Department Council of the college where the student has enrolled for the UG (Honours) programme.

#### 2.2. EVALUATION OF INTERNSHIP

- The evaluation of Internship shall be done internally through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG (Honours) programme.
- The credits and marks for the Internship will be awarded only at the end of semester 6.
- The scheme of continuous evaluation and the end-semester viva-voce examination based on the submitted report shall be as given below:

Sl. No.	Components of Eval	uation of Internship	Marks for	Weightage
			Internship	
			2 Credits	
1	Continuous evaluation of internship through interim	Acquisition of skill set	10	40%
2	presentations and reports by the committee internally	Interim Presentation and Viva-voce	5	
3	constituted by the Department Council	Punctuality and Log Book	5	
4	Report of Institute Visit/ Stu	5	10%	
5	End-semester viva-voce examination to be	Quality of the work	6	35%
6	conducted by the	Presentation of the work	5	
7	committee internally constituted by the Department Council	Viva-voce	6	
8	Evaluation of the day-to-dinternship supervisor, and finend semester viva—voce committee internally const Council	8	15%	
		Total Marks	50	

### SEC3 -Project implementation

A mandatory mini-project (SEC 3) is scheduled in the VI Semester of the BSc (Honours) Computer Science program. It is designed to cultivate students' research and software development skills. It will serve as a capstone experience, allowing students to bridge the gap between theoretical knowledge acquired in the classroom and its practical application to real-world problems.

#### 3.1 Project Selection and Approval:

- Student groups (at most four members) can propose projects in computer science or related disciplines.
- Projects can be experimental (building a prototype), theoretical (a research paper), or computational (implementing an algorithm).
- Project proposals must be submitted for **prior approval** from the Department Council.
- Each project team will be assigned a project supervisor for guidance.

#### **Project Duration:**

- The mini-project duration is one semester.
- **Minimum engagement:** 90 hours per student.

#### **Project Deliverables:**

- Two hard copies and one softcopy of a well-structured typed report outlining:
  - o Project objectives and requirements analysis
  - System design and architecture
  - o Implementation details (including sample code snippets)
  - Test cases and results
  - Conclusion and future work
- A signed undertaking by the student declaring the originality of the work and the absence of plagiarism.
- A certificate from the project supervisor confirming the same.

#### 3.2 Evaluation Criteria and Rubrics:

- 1. **Internal Evaluation (25 Marks)** Conducted by the project supervisor throughout the semester. This could involve:
  - o Project Proposal and Planning
    - Clarity of project goals and objectives.
    - Feasibility of the chosen approach.
    - Quality of system study/literature review and proposed methodology.
    - Clarity of project schedule and division of tasks within the team.
  - Project Progress and Implementation
    - Regular code reviews and adoption of feedback provided by the supervisor.
    - Attendance and active participation in project meetings.
    - Completion of project milestones as planned.
    - Quality of code documentation and adherence to coding standards.
  - Interim Presentations
    - Effectiveness of communication and presentation skills.
    - Clarity of technical details and progress made.
    - Ability to answer questions about the project effectively.

Sl. No	Components of Evaluation of Project	Marks for the Internal Evaluation of Mini project
1	Project Proposal and Planning	5
2	Project Progress and Implementation	10
3	Interim Presentations	10
	Total Marks	25

- 2. **External Evaluation (50 Marks)** Conducted by an external examiner appointed by the University. This will take place at the end of the VI<sup>th</sup> semester:
  - o Project Report:
    - **Content:** Completeness, organisation, clarity, and technical accuracy.
    - Structure: Introduction, System Design/literature review, methodology, implementation details, results, discussion, conclusion, future work, and references.
    - **Presentation:** Quality of writing, grammar, and formatting.
  - o Project Demonstration
    - **Demonstration:** Ability to showcase the functionality of the project or present the research findings effectively.
  - Viva-voce
    - **Viva-voce:** Understanding of project concepts, ability to answer questions confidently, and critical thinking skills.

Sl. No	Components of Evaluation of Project	Marks for the End Semester Evaluation of Mini project
1	Project Report	15
2	Project Demonstration	20
3	Viva-voce	15
Total Marks		50

#### 4. PROJECT

#### 4.1. PROJECT IN HONOURS PROGRAMME

- In Honours programme, the student has the option to do a Project of 12-credits instead of three Core Courses in Major in semester 8.
- The Project can be done in the same institution or any other higher educational institution (HEI) or research center.

• A faculty member of the respective institution, where the student does the Project, should be the supervisor of the Project.

#### 4.2. PROJECT IN HONOURS WITH RESEARCH PROGRAMME

- Students who secure 75% marks and above (equivalently, CGPA 7.5 and above) cumulatively in the first six semesters are eligible to get selected to Honours with Research stream in the fourth year.
- In Honours with Research programme, the student has to do a mandatory Research Project of 12-credits in semester 8.
- The approved research centres of University of Calicut or any other university/ HEI can offer the Honours with Research programme. The departments in the affiliated colleges under University of Calicut, which are not the approved research centres of the University, should get prior approval from the University to offer the Honours with Research programme. Such departments should have minimum one faculty member with Ph.D., and they should also have the necessary infrastructure to offer Honours with Research programme.
- A faculty member of the University/ College with a Ph.D. degree can supervise the research
  project of the students who have enrolled for Honours with Research. One such faculty member
  can supervise maximum four students in Honours with Research stream.

#### 4.3. GUIDELINES FOR THE PROJECT IN HONOURS PROGRAMME

#### AND HONOURS WITH RESEARCH PROGRAMME

- 1. Project can be in Computer Science or allied disciplines.
- 2. Project should be done individually.
- 3. Project work can be of experimental/ theoretical/ computational in nature.
- 4. There should be minimum 240 hrs. of engagement from the student in the Project work in Honours programme.
- 5. There should be minimum 360 hrs. of engagement from the student in the Project work in Honours with Research programme.
- 6. The various steps in project works are the following:
  - ➤ Wide review of a topic.
  - Investigation on a problem in systematic way using appropriate techniques.
  - > Systematic recording of the work.
  - > Reporting the results with interpretation in a standard documented form.
  - > Presenting the results before the examiners.

- 7. During the Project the students should make regular and detailed entries in to a personal log book through the period of investigation. The log book will be a record of the progress of the Project and the time spent on the work, and it will be useful in writing the final report. It may contain experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated. The Project supervisor should periodically examine and countersign the log book.
- 8. The log book and the typed report must be submitted at the end of the Project. A copy of the report should be kept for reference at the department. A soft copy of the report too should be submitted, to be sent to the external examiner in advance.
- 9. It is desirable, but not mandatory, to publish the results of the Project in a peer reviewed journal.
- 10. The project report shall have an undertaking from the student and a certificate from the research supervisor for originality of the work, stating that there is no plagiarism, and that the work has not been submitted for the award of any other degree/ diploma in the same institution or any other institution.
- 11. The project proposal, institution at which the project is being carried out, and the project supervisor should be prior-approved by the Department Council of the college where the student has enrolled for the UG (Honours) programme.

#### 4.4. EVALUATION OF PROJECT

- The evaluation of Project will be conducted at the end of the eighth semester by both internal and external modes.
- The Project in Honours programme/ Honours with Research programme will be evaluated for 300 marks. Out of this, 90 marks is from internal evaluation and 210 marks, from external evaluation.
- The internal evaluation of the Project work shall be done through continuous assessment mode by a committee internally constituted by the Department Council of the college where the student has enrolled for the UG (Honours) programme. 30% of the weightage shall be given through this mode.
- The remaining 70% shall be awarded by the external examiner appointed by the University.
- The scheme of continuous evaluation and the end-semester viva-voce of the Project shall be as given below:

Components of Evaluation of Project	Marks for the	Weightage
	Research	
	Project(Honours)/	
	(Honours with	
	Research)	
	12 Credits	
Continuous evaluation of project work through	90	30%
interim presentations and reports by the		
committee internally constituted by the		
Department Council		
End-semester viva-voce examination to be	150	50%
conducted by the external examiner appointed		
by the university		
Evaluation of the day-to-day records and	60	20%
project report submitted for the end-semester		
viva-voce examination conducted by the		
external examiner		
Total Marks	300	

### INTERNAL EVALUATION OF PROJECT

Sl. No	Components of Evaluation of Project	Marks for the Research Project (Honours programme)
51. 110	Components of Evaluation of Froject	/(Honours with
		Research programme)
		12 credits
1	Skill in doing project work	30
2	Interim Presentation and Viva-Voce	20
3	Punctuality and Log book	20
4	Scheme/ Organization of Project Report	20
	Total Marks	90

### EXTERNAL EVALUATION OF PROJECT

		Marks for the
	Components of Evaluation of Project	Research Project
Sl. No		(Honours programme)
S1. NO		/ (Honours with
		Research programme)
		12 credits
1	Content and relevance of the Project,	
	Methodology, Quality of analysis,	50
	and Innovations of Research	

2	Presentation of the Project	50
3	Project Report (typed copy), Log Book and References	60
4	Viva-Voce	50
	Total Marks	210

#### 5. GENERAL FOUNDATION COURSES

• All the General Foundation Courses (3-credits) in Computer Science are with only theory component.

#### **5.1. INTERNAL EVALUATION**

Sl. No.	Components of Internal	Internal Marks of a General Foundation		
	Evaluation of a General	Course of 3-credits in Computer Science		
	Foundation Course in Computer Science	4 Theory Modules	Open-ended Module	
1	Test paper/ Mid-semester Exam	10	2	
2	Seminar/ Viva/ Quiz	6	2	
3	Assignment	4	1	
		20	5	
Total			25	

#### **5.2. EXTERNAL EVALUATION**

External evaluation carries about 70% marks. Examinations will be conducted at the end of each semester. Individual questions are evaluated in marks and the total marks are converted into grades by the University based on 10-point grading system (refer section 5).

PATTERN OF QUESTION PAPER FOR GENERAL FOUNDATION COURSES

	Туре	Total No. of Questions	No. of	Marks for	Ceiling
Duration			Questions to be	Each	of
			Answered	Question	Marks
	Short Answer	10	8 – 10	2	16
1.5 Hours	Paragraph/ Problem	5	4-5	6	24
	Essay	2	1	10	10
Total Marks					

#### 6. LETTER GRADES AND GRADE POINTS

• Mark system is followed for evaluating each question.

- For each course in the semester letter grade and grade point are introduced in 10-point indirect grading system as per guidelines given below.
- The Semester Grade Point Average (SGPA) is computed from the grades as a measure of the student's performance in a given semester.
- The Cumulative GPA (CGPA) is based on the grades in all courses taken after joining the programme of study.
- Only the weighted grade point based on marks obtained shall be displayed on the grade card issued to the students.

#### LETTER GRADES AND GRADE POINTS

Sl.	Percentage of Marks	Description	Letter	Grade	Range of	Class
No.	(Internal & External		Grade	Point	Grade	
	Put Together)				Points	
1	95% and above	Outstanding	О	10	9.50 – 10	First Class
2	Above 85% and below 95%	Excellent	A+	9	8.50 - 9.49	with Distinction
3	75% to below 85%	Very Good	A	8	7.50 - 8.49	
4	65% to below 75%	Good	B+	7	6.50 - 7.49	
5	55% to below 65%	Above Average	В	6	5.50 – 6.49	First Class
6	45% to below 55%	Average	C	5	4.50 - 5.49	Second Class
7	35% to below 45% aggregate (internal and external put together) with a minimum of 30% in external valuation	Pass	P	4	3.50 – 4.49	Third Class
8	Below an aggregate of 35% or below 30% in external evaluation	Fail	F	0	0 – 3.49	Fail
9	Not attending the examination	Absent	Ab	0	0	Fail

- When students take audit courses, they will be given Pass (P) or Fail (F) grade without any credits.
- The successful completion of all the courses and capstone components prescribed for the threeyear or four-year programme with 'P' grade shall be the minimum requirement for the award of UG Degree or UG Degree Honours or UG Degree Honours with Research, as the case may be.

#### 6.1. COMPUTATION OF SGPA AND CGPA

• The following method shall be used to compute the Semester Grade Point Average (SGPA):

The SGPA equals the product of the number of credits (Ci) with the grade points (Gi) scored by a student in each course in a semester, summed over all the courses taken by a student in the semester, and then divided by the total number of credits of all the courses taken by the student in the semester,

i.e. SGPA (Si) = 
$$\Sigma i$$
 (Ci x Gi) /  $\Sigma i$  (Ci)

where Ci is the number of credits of the i<sup>th</sup> course and Gi is the grade point scored by the student in the i<sup>th</sup> course in the given semester. Credit Point of a course is the value obtained by multiplying the credit (Ci) of the course by the grade point (Gi) of the course.

$$SGPA = \frac{Sum \text{ of the credit points of all the courses in a semester}}{Total \text{ credits in that semester}}$$

ILLUSTRATION - COMI CTATION OF SOLA						
Semester	Course	Credit	Letter	Grade	Credit Point	
			Grade	point	(Credit x Grade)	
I	Course 1	3	A	8	3 x 8 = 24	
I	Course 2	4	B+	7	4 x 7 = 28	
I	Course 3	3	В	6	3 x 6 = 18	
I	Course 4	3	О	10	3 x 10 = 30	
I	Course 5	3	С	5	3 x 5 = 15	
I	Course 6	4	В	6	4 x 6 = 24	
	Total	20			139	
	SGPA				139/20 = 6.950	

ILLUSTRATION - COMPUTATION OF SGPA

• The Cumulative Grade Point Average (CGPA) of the student shall be calculated at the end of a programme. The CGPA of a student determines the overall academic level of the student in a programme and is the criterion for ranking the students.

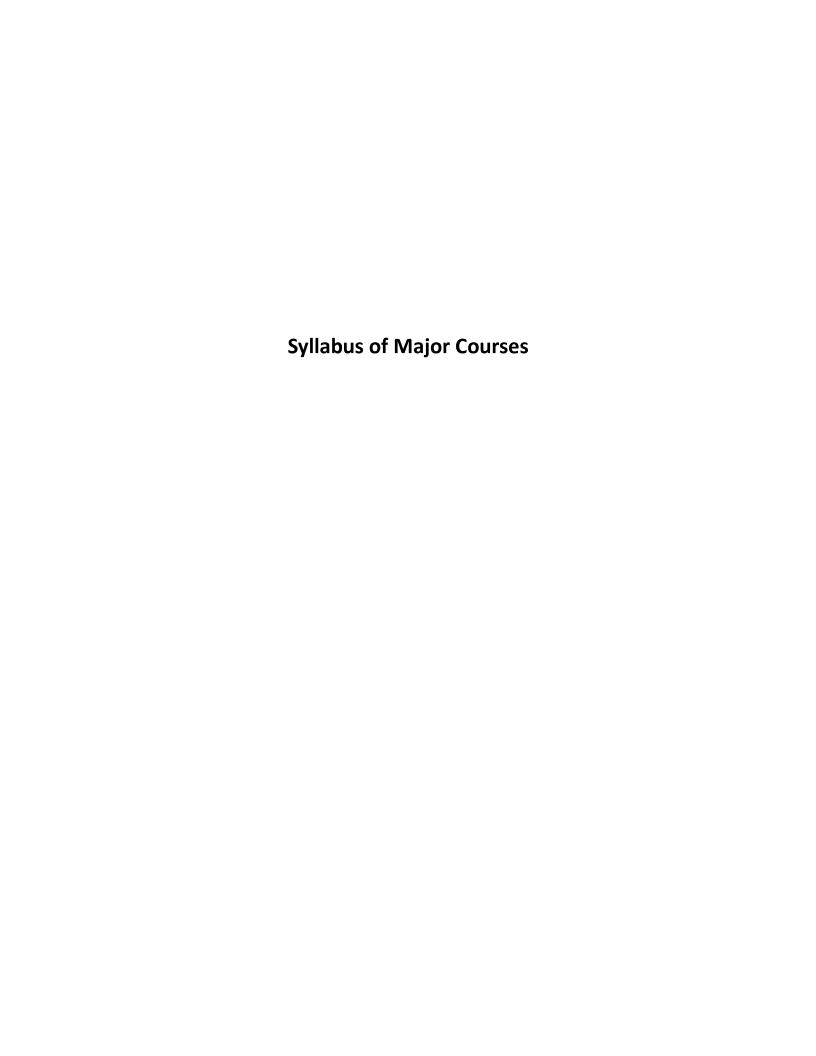

CGPA for the three-year programme in CUFYUGP shall be calculated by the following formula.

$$CGPA = \frac{Sum of the credit points of all the courses in six semesters}{Total credits in six semesters (133)}$$

CGPA for the four-year programme in CUFYUGP shall be calculated by the following formula.

$$CGPA = \frac{Sum \text{ of the credit points of all the courses in eight semesters}}{Total \text{ credits in eight semesters (177)}}$$

- The SGPA and CGPA shall be rounded off to three decimal points and reported in the transcripts.
- Based on the above letter grades, grade points, SGPA and CGPA, the University shall issue the transcript for each semester and a consolidated transcript indicating the performance in all semesters.

### **Fundamentals of Computers and Computational Thinking**

Module	Unit	Content	Hrs	Marks
I		History and Evolution of Computing System	9	15
	1	Evolution of Computers – History, Generations	1	
	2	Overview of Computer System- Von Neumann Model, Number Systems(Binary, Hexa, Octal, Decimal)	2	
	3	<b>Number Conversion and Digital Codes-</b> Conversion from one number system to another, Digital Codes (Gray, Excess-3, BCD)	2	
	4	Pioneers and Contributors of Computing Systems - First Mechanical computer - Charles Babbage, Stored-Program Architecture - John von Neumann, Turing machine - Alan Turing, First General-Purpose Electronic Digital Computer -	2	
		John Mauchly and J. Presper Eckert, Artificial Intelligence- John McCarthy (Contributions only).		
	5	Computing Systems: Past to Present - Single Core, Dual-Core and Multi-Core Processors, Graphics Processing Unit (GPU), Accelerated Processing Unit, Quantum Processing Units (QPU) (Concept only).	2	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

II		Hardware	11	20
	6	Electronic Components – Active Components - Diode, Transistor, Integrated Circuits (Definition, Symbol and Function).	1	
	7	<b>Electronic Components</b> - Passive Components - Resistors, Capacitors, Inductors (Definition, Symbol and Function).	1	
	8	<b>Motherboard Components</b> – CPU and Cooling Fan, RAM, Expansion Slots (PCIe), Input/Output Ports, Chipset (Concept only).	2	
	9	Motherboard Components – BIOS/UEFI Chip, SATA/NVMe Slots, Network Interface, Ports- Ethernet, VGA, HDMI, USB (Concept only).	3	
	10	Computer Components – SMPS, Motherboard, Storage Devices (HDD, SSD, NVMe )(Concept only).	2	
	11	Computer Components – RAM (DRAM, SRAM, DDR SDRAM), ROM, Cache (Concept only).	2	
III		Software	10	15
	12	<b>Softwares</b> - Application Software, System Software, Examples	1	
	13	Operating Systems – Need of OS, Types – Proprietary and Open Source, Hardware Software Compatibility, POST, Booting.	4	
	14	OS Installation – Bootable Media, UEFI / Legacy BIOS, Disk Partitioning, Dual Booting, Boot Manager – BOOTMGR, Grub, File Systems- FAT, NTFS, ext4.	4	
	15	<b>Device Drivers</b> – Need of Device Drivers, Driver Interactions (Basic concept only).	1	
IV		Computer Science and Computational Thinking	15	20
	16	<b>Computer Science</b> - Introduction, Role of Computer Science in the Modern Era	1	
	17	<b>Problem Solving -</b> Defining the Problem, Systematic Approach.	2	
	18	Computational Thinking – Problem Decomposition, Pattern Identification, Abstraction, Generalization.	2	
	19	<b>Logical Thinking</b> – Inductive and Deductive Reasoning, Logical Expressions.	2	
	20	Algorithmic Thinking – Intuition vs Precision, Defining algorithms.	2	
	21	<b>Algorithm</b> – Need of Algorithm, Qualities of a Good Algorithm, Examples.	3	
	22	Flowchart - Flowchart Symbols, Examples. Raptor.	3	
V		Lab Activities	30	30

Some of the suggested lab activities are given below.

- 1. Identify, categorize and list out specifications of given **electronic components**.
- 2. Identify and list out specifications of given **motherboard components**.
- 3. Identify and Describe various ports and connectors on the motherboard.
- 4. Installation of various **components on the motherboard** (Processor, Fan, Heat Sink, RAM etc.)
- 5. Hands-on experience in **assembling and disassembling** a computer system (SMPS, Motherboard, Storage Device etc.).
- 6. Accessing and configuring the Basic Input/ Output System (BIOS) or Unified Extensible Firmware Interface (UEFI) settings.
- 7. Preparation of **Bootable media** with software like *Rufus*.
- 8. Check the hardware compatibility and **Install operating** system (single booting) on given computer.
- 9. Check the hardware compatibility and **Install operating** systems (dual booting Windows and Linux) on a given computer.

**Develop algorithms and implement** the solutions using *RAPTOR* flowchart execution tool for the following problems.

- 10. Read and print a number.
- 11. Read the price of three items and print the total bill amount.
- 12. Read the ages of two persons and print the elder one.
- 13. Read the number of units of electricity consumed and print the bill amount for various slabs.
- 14. Read a year and check whether it is a leap year.
- 15. Print first N numbers (using loop).

V		Hands-on Problem Solving Using C	30
		Practical Applications, Case Study and Course Project	

1	Implement the following:	30
	1. Variables, Data types, Constants and Operators:	] 30
	1. Evaluation of expression ex: $((x+y)^2 * (x+z))/w$	
	2. Temperature conversion problem (Fahrenheit to Celsius)	
	3. Program to convert days to months and days (Ex: 364 days = 12 months	
	and 4 days)	
	4. Salesman salary (Given: Basic Salary, Bonus for every item sold,	
	commission on the total monthly sales)	
	2. Decision making (Branch / Loop) Statements:	
	5. Solution of quadratic equation	
	6. Maximum of three numbers	
	7. Calculate Square root of five numbers (using goto statement)	
	8. Pay-Bill Calculation for different levels of employee (Switch statement)	
	9. Fibonacci series	
	10.Armstrong numbers	
	11.Pascal 's Triangle	
	3. Arrays, Functions and Strings:	
	12. Prime numbers in an array	
	13. Sorting data (Ascending and Descending)	
	14. Matrix Addition and Subtraction	
	15. Matrix Multiplication	
	16. Transpose of a matrix	
	17Function with no arguments and no return value	
	18. Functions with argument and return value	
	19. Functions with argument and multiple return values	
	20. Function that convert lower case letters to upper case	
	21. Factorial using recursion.	
	22. Perform String Operations using Switch Case	
	23. Largest among a set of numbers using command line argument	
	4. Structures and Union:	
	24. Structure that describes a Hotel (name, address, grade, avg room rent,	
	number of rooms) Perform some operations (list of hotels of a given	
	grade etc.)	
	25. Using Pointers in Structures.	
	26. Cricket team details using Union.	
	5. Pointers:	
	27. Evaluation of Pointer expressions	
	28. Function to exchange two pointer values	
	29. Reverse a string using pointers	
	30.Insertion, deletion, and searching in an array

Mod ule	Unit	Content	Hrs (45+30)	Marks (70)			
I	Int	troduction to Data Structures and Basic Algorithms	9	15			
	1	Overview of Data Structures: Data type Vs. Data structure, ADT, Definition of Data structure, Data structure Classification – Linear, Non-Linear (Array, Linked List, Stack, Queue, Tree, Graph)	1				
	2	Introduction to Arrays: Definition, Types (1 Dimensional, 2 Dimensional, Multi-Dimensional, Sparse matrix), Different Array Operations with Algorithm (insertion, deletion, traversal)	3				
	3	Structures and Self-referential structures	1				
	4	Introduction to Linked list: Definition, Types (Single linked list, Doublelinked list, Circular linked list- concept only).	2				
	5	Singly Linked List Operations with Algorithm (insertion, deletion, traversal)					
П		Stack and Queue	10	20			
	6	Introduction to Stack: Definition, stack operations with Algorithm, Applications: recursion, infix to postfix - example and Algorithm	3				
	7	Implementation of Stack: using array (overflow & underflow) and Linkedlist (with algorithm)	2				
	8	8 Introduction to Queue: Definition, queue operations with Algorithm, Types: Double ended queue (Input Restricted and Output restricted), Circular queue, Applications					
	9	9 Implementation of Queue: using array and Linked list (with algorithm)					
II		Non- Linear Data Structures	16	20			
I	10	Introduction to Trees: Basic terminology, Types (Binary tree-complete, full, skewed etc., Expression Tree)	2				
	11	Properties of Binary tree, Applications.	2				
	12	Binary tree representations- using array and linked list	2				
	13	Operations on Binary tree- Insertion, Deletion, Traversal- inorder, preorder, postorder - (concepts with examples)	3				
	14	Algorithm of non-recursive Binary tree traversal	3				
	15	Introduction to Graph: Definition, Basic terminology, Types (Directed, Undirected, Weighted).	2				
	16	2					
I		Sorting and Searching	10	15			
$\mathbf{V}$	17	Introduction to Sorting: Definition, Classification (Internal, External)	1				
	18	Internal Sorting Algorithms: Selection sort- Selection sort algorithm, Exchange sort- Bubble sort algorithm	2				
	19	External Sorting Algorithms: Merge sort- Demonstrate with example.(NoAlgorithm needed)	1				
	20	Advanced sorting Algorithm-: Quick sort- Demonstrate with example. (NoAlgorithm needed)	1				

	21	Introduction to Searching: Linear search and Binary search( Algorithm needed) with example.	2
	22	Hashing: Hash Tables, Hash Functions, Different Hash Functions – Division method, Multiplication method, Mid square method, Folding Method, Collision and Collision resolution Techniques: Open	2
		hashing- Chaining, Closed hashing- Probing	
V			30
	Applic	ations, Case Study and Course Project	
	1	Implement the following:	25
		1. Basic Operations in a single linked list (Menu driven)	
		<b>2.</b> Sort the elements in given singly linked list	
		<b>3.</b> Stack using array.	
		4. Stack using Linked list	
		<b>5.</b> Queue using Array	
		6. Queue using Linked list	
		7. Sorting algorithms- Selection, Bubble Sort	
		8. Searching Algorithms- Linear and Binary search	
	2	Project/ Case study	5

Module	Unit	Content	Hrs	Mark
I		10	15	
	1	Introduction, Characteristics of the Database Approach	2	

	2	Actors on the Scene, Workers behind the Scene, Advantages of Using	2	
	_	the DBMS Approach, File system vs Database		
	3	Data Models, Schemas, and Instances, Three-Schema Architecture	3	
		and Data Independence		
	4	Database Languages and Interfaces	2	
	5	Structured, Semi Structured and Unstructured Database	1	
II		Database Design	14	20
	6	ER Model- Basic concepts, entity set & attributes, notations	2	
	7	Relationships and constraints, cardinality, participation, notations,	2	
		weak entities		
	8	2		
	9	2		
	10	Relational Database Design- Atomic Domain and Normalization-INF, 2NF,3NF,BCNF	4	
	11	4NF,5NF	2	
III		Query Languages	11	20
	12	SQL-, introduction to Structured Query Language (SQL)	1	
	13	Data Definition Language (DDL), Table definitions and operations	2	
	14	SQL DML (Data Manipulation Language) - SQL queries on single	4	
		and multiple tables		
	15	Nested queries (correlated and non-correlated), Aggregation and		
		grouping, Views, assertions, Triggers, SQL data types.		
	16	Introduction to NoSQL Databases	2	
	17	Main characteristics of Key-value DB (examples from: Redis),	2	
		Document DB (examples from: MongoDB)		
IV		action Processing,Concurrency Control	10	15
	18	Transaction Processing: Introduction, Transaction and System	3	
	10	Concepts		
	19	Desirable Properties of Transactions	1	
	20	Characterizing Schedules Based on Recoverability & Serializability	2	
	21	Transaction Support in SQL.	1	
¥7	22	Introduction to Concurrency Control: Two-Phase Locking Techniques	3	
V		S LAB	30	
	1	Students should decide on a case study and formulate the problem statement.	3	
	2		3	
	2	Based on Identified problem Statement, Design ER Diagram (Identifying entities, attributes, keys and relationships between	3	
		entities, cardinalities, generalization, specialization etc.)		
		Note: Student is required to submit a document by drawing ER		
		Diagram to the Lab teacher.		
	3	Converting ER Model to Relational Model (Represent entities and	2	
	3	relationships in Tabular form, Represent attributes as columns,		
		identifying keys) Note: Student is required to submit a document		
		showing the database tables created from ER Model.		
		showing the database tables created from ER Model.		

4	Normalization -To remove the redundancies and anomalies in the	3	
	above relational tables, Normalize up to Third Normal Form		
5	Creation of Tables using SQL- Overview of using SQL tool, Data	3	
	types in SQL, Creating Tables (along with Primary and Foreign		
	keys), Altering Tables and Dropping Tables		
6	Practicing DML commands-Insert, Select, Update, Delete	2	
7	Experiment 7:Practicing Queries using ANY, ALL, IN, EXISTS,	2	
	NOT EXISTS, UNION, INTERSECT,		
	CONSTRAINTS etc.		
8	Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer	2	
	and Equi).		
9	Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP	4	
	BY, HAVING, VIEWS Creation and		
	Dropping.		
10	Install and Configure MongoDB to execute NoSQL Commands.	6

	21	Introduction to Matplotlib Basic plotting - Line plots, Scatter plots, Bar plots, Histograms and Pie charts.	2
V		Hands-on Data Structures:  Practical Applications, Case Study and Course Project	30

Basics of Python	20
Demonstrate basic data types in python using interactive Interpreter.	
2. Write a Python script that reads two integers and perform all	
arithmetic operations on these two numbers.	
3. Write a program to compute distance between two points.	
4. Write a program to calculate the area of a circle.	
Control Structures	
5. Write a program to check whether a number is odd or even.	
6. Write a program that reads a positive integer, $n$ , from the user and	
then displays the sum of the first n natural numbers.	
7. Write a Python program to check whether a given year is a leap	
year or not.	
8. Develop a program that reads a four-digit integer from the user	
and displays the sum of the digits in the number. For example, if	
the user enters 2151 then your program should display	
2+1+5+1=9.	
Function  O Write a program to find the largest of three numbers using	
9. Write a program to find the largest of three numbers using functions. The program should pass three numbers as arguments	
and should return the result.	
10. Write a function to check whether a given number is prime or not.	
11. Write a recursive function to find the factorial of a number.	
Python Data Structures: Strings, Sets, Lists, Tuples and Dictionaries	
12. Create a program that checks whether a given string is a palindrome or not.	
13. Write a program to check whether an item exists in a tuple.	
14. Write a program to create intersection, union, set difference, and symmetric difference of sets.	
15. Write a program to create a telephone directory using a dictionary and display its contents. Also check for a specific phone number in the dictionary.	
NumPy, Pandas and Matplotlib	
16. Write a program to implement matrix multiplication using NumPy.	
17. Create a pandas series from a dictionary of values, and an	
ndarray.	
18. Write a program to draw a line plot for the given heights and	
weights of a group of people.	
height=[145,155,165,175,185,195] weight=[43, 56, 60,69, 78,95]	
weigin-[+3, 30, 00,03, 70,33]	
2 Case Study	3
Capstone (/Course) Project: Build a practical application using any one	7
package and demonstrate using visualization tools.	'
package and demonstrate using visualization tools.

		Class/Concept Description: Characterization and		
		Discrimination, Mining Frequent Patterns,		
		Associations, and Correlations, Classification and		
		Regression for Predictive Analysis, cluster		
		analysis, outlier analysis		
	4	Technologies used- statistics, machine learning,	3	
		data base systems and ware house, information		
		retrieval (Introduction only)		
II		Data Preprocessing	14	20
	5	Data Preprocessing: An Overview	2	
	6	Data Cleaning- missing value, noisy data, Data	2	
		Cleaning as a Process		
	7	Data Integration- Entity Identification Problem,	3	
		Redundancy and Correlation Analysis, Tuple		
		Duplication, Data Value Conflict Detection and		
		Resolution		
	8	Data Reduction - Wavelet Transforms, Principal	4	
		Components Analysis, Attribute Subset Selection,		
		Regression and Log-Linear Models: Parametric		
		Data Reduction, Histograms,		
	9	Data Transformation and and Data Discretization-	3	
		Data Transformation by Normalization,		
		Discretization by Binning		
III		Association Rule Mining & Classification	10	15
	10	Introduction to Association Rule Mining Frequent	1	
		Itemset, Closed Itemset, and Association Rules		
	11	Frequent Itemset Mining Apriori Algorithm,	1	
		Generating Association Rules from Frequent Itemsets		
	12	Introductio to classification: Decision tree	2	
	13	Attribute Selection measures in decision tree	2	
	14	Bayes Classification methods	2	
	15	Techniques to Improve Classification Accuracy	2	
IV		Clustering, Outlier detection	14	20
	16	Introduction to unsupervised techniques: challenges	2	
	17	Clustering- K Means	2	
	18	Variants of k- Means	2	
	_			

	19	Hierarchical clustering	2	
	20	Density Based clustering- DBScan	2	
	21	Introduction to outliers and novelty detection	2	
	22	Recommender system	2	
V		Open Ended Module: Case Studies	12	
	1	<ul> <li>Real-world applications of data mining</li> <li>Case studies and projects</li> <li>Ethical considerations in data mining</li> </ul>

Programme	B. Sc. Computer Science						
Course Title	Object Oriented Programming (Java)						
Type of Course	Major						
Semester	V						
Academic Level	300-399						
Course Details	Credit	Lecture	Tutorial	Practical	Total		
		per week	per week	per week	Hours		
	4	3	-	2	75		
Pre-requisites	1. Knowledge in b 2. Knowledge in 0	1 0	_				
Course Summary	The aim of this co	ourse is to pro	vide student	s with an unde	erstanding of		
	the basic concepts in Java programming. This course will help students create GUI applications in Java and establish database connectivity.						

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	To understand the concepts and features of Object Oriented Programming(OOPs)	U	С	
CO2	To practice programming in Java	Ap	P	
CO3	To learn java's exception handling mechanism, I/O operations and multithreading.	Ap	P	
CO4	To learn java's O operations and multithreading.	Ap	P	
CO5	Implement programs using Java Database Connectivity	Ap	P	
CO6	Students will be capable of developing Graphical User Interface (GUI) applications using Swing, understanding layout management, and implementing basic event handling.	Ap	P	

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

Module	Unit	Content	Hrs	Marks
I		17	(70)	
1	1	Review of OOPs and Introduction to Java	17	20
	1	Overview of OOPs Concept	1	
	2	History of Java and Java Virtual Machine	1	
	3	Basic Structure of Java Programming : Data Types, Operators, Expression and Control Statement	2	
	5	Arrays and String: One Dimensional Array, Multidimensional Array, String Operations	2	
	6	Scanner, Type Conversion and Casting	2	
	7	Introduction to Class and Objects: Definition of Class and Objects, Access Modifier	2	
	8	Constructor and Inheritance: Types of Constructors, Types of Inheritance, use of extends, super, final, this keyword	3	
	9	Method Overriding, Method Overloading and Dynamic Method Dispatch: Programming implementation of Method Overriding and Overloading	2	
	10	Interface, Abstract Class and Packages; Programming implementation of Interface, Abstract class and Packages	2	
II		Exception and I/O Operations	8	15
	11	Exception: Baic Concept of exception and Exception Hierarchy	2	
	12	Managing Exception: Use of trycatch finally blocks, throw and throws keyword	2	
	13	Managing Input/Output files in Java : Importance of I/O Operations, BufferedInputStream, BufferedOutputStream	2	
	14	File Operations: Programming implementation of FileInputStream, FileOutputStream, FileReader, FileWriter	2	
III		Multithreading and Database Connectivity	9	20
	15	Thread: Concept of Thread and Thread state	2	
	16	Programming Implementation of Thread: Using extending thread class and Runnable interface, Thread Priorities	2	

	17	Database Programming: Basic Concept of Database and JDBC	2	
		Driver, Connecting with Database		
	18	Querying Database: Programming implementation of creating	3	
		table, insert and update values to the table using		
		preparedStatement, Statement object and querying the values		
		using ResultSet and ResultSetMetadata		
IV		GUI Programming	11	15
	19	Introduction to GUI Application : AWT Basics, Introduction to	2	
		IDE		
	20	Swing Programming: Introduction of Model-View-Controller	2	
		Pattern		
	21	Introduction to layout Management : Fundamental controls used	4	
		in SWING		
	22	Event Handling: Basic Knowledge of Event Handling(Event	3	
		Class and Event Listener)		
V	Н	lands-on Programming in Java(Using IDE NetBeans, Eclipse,	30	30
		VSCode):		
		Practical Applications, Case Study and Course Project	٠	
	1	Implement the following:		
		1. String and Arrays:	20	
		Write a program to perform various String operations in Java(Hint:	•	
		charAt, substring, concat, equals,, isEmpty)		
		Write a program to implement Multi-Dimensional Array(Hint :	•	
		Matrix multiplication)		
		2. Object Oriented Programming Concept:	·	
		Write a program to implement the concept of class and object.(Hint:		
		Complex Number addition)		
		Write a program to demonstrate the order in which constructors are	·	
		invoked in multilevel inheritance.		
		Write a program to implement method overloading		
		Write a program to implement method overriding.	٠	
		3. Exception Handling and Multithreading:		
		Write a program to implement trycath, finally block (Hint:		
		Arithmetic and ArrayOutOfBoundException)		
		1		

Write a multi thread java program for displaying odd n even numbers up to a limit (Hint :Create thread by inho Thread class).			
Write a multi thread java program for displaying odd neven numbers up to a limit (Hint: Implement thread us Runnable interface).  4. GUI Application with Database:  Write a swing program to track mouse & key events  Write a swing program to fetch data from TextFiled and in Label  Write a swing program to perform form validation  Write a swing program to display data in tabular form  Write a simple login program without database connect  Write a swing program to create a registration form (H	d display it  tivity int : Create		
database using JDBC)  Case Study		2	
- Cust Study			
Project: Build a application for shop management s Admin Login, Product registration, stock management selling, employee salary)		8

Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours					
	4	4	-	-	60					
Pre-requisites	Basic understand	ling of mathema	atical concepts,	especially areas	like algebra					
Course Summary	This course pro digital systems, logic, combinati organization and understanding of to the design and	covering topic onal and seque d design. Thro digital systems	s related to bir ential logic circ ughout the cou from the basic	nary arithmetic, uits, as well as urse, students w building blocks	basic computer basic computer vill gain a solid					

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Understand Basic Binary arithmetic Techniques	U	С	Instructor-created exams / Quiz
CO2	Implement logic operations using basic gates and Boolean algebra, design and optimise logic expressions using Karnaugh maps and design combinational logic circuits	Ар	Р	Instructor-created exams/ Home Assignments
CO3	Understand the operation of latches and flip flops and the design of sequential logic circuits	U	С	Instructor-created exams

CO4	Learn the basic computer organization by understanding the role of registers, buses, ALU and control unit and the concepts like parallel processing and pipelining	U	С	Instructor-created exams
CO5	Understand how instructions represented, addressed and executed and how a microprogrammed control unit work	U	С	Instructor-created exams
CO6	Understand the concepts of memory and IO organization	U	С	Instructor-created exams

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

### **Detailed Syllabus:**

Module	Unit	Content	Hrs	Marks
			(48+12)	(70)
I		Number systems and Boolean Algebra	10	15
	1	Binary arithmetic: Addition, Subtraction, Concepts of 1's and 2's complement, 1's and 2's complement addition	2	
	2	Logic Gates: AND, OR, NOT, NOR, NAND, XOR, XNOR, Universal Property of NAND and NOR gates	3	
	3	Boolean algebra: Boolean operations, laws and rules, Demorgan's theorem	2	
	4	Boolean Expression Simplification using K Map up to 4 variable	3	
II		12	20	
	5	Combinational Circuits: Half Adder, Full Adder, Ripple Carry Adder	1	
<u> </u>	6	Combinational Circuits: Encoder and Decoder (Basic Circuit Only)	1	
	7	Combinational Circuits: Multiplexer and Demultiplexer (Basic Circuit Only)	1	
	8	Concepts of Latches and Flip Flops, Types of Flip Flops (SR, D, JK, T): Truth Table and Circuit	3	
·	9	Sequential Circuits: Synchronous and Asynchronous Counters	4	

<sup>#</sup> - Factual Knowledge (F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	10	Johnsons and Ring counter, Shift Registers	2	
III	F	10	15	
	11	2		
	12	Computer Instructions	1	
	13	Timing and Control: Concepts of hardwired and microprogrammed control	1	
	14	Instruction Cycle	1	
	15	Microprogrammed Control: Control memory & Address Sequencing	3	
	16	Micro Instruction Format and Symbolic Micro Instruction	2	
IV		Processor ,Memory and I/O Organization	16	20
	17	Processor Organisation: General Register organization and stack organization, Instruction formats and addressing modes	4	
	18	Processor Organisation: RISC vs CISC, Parallel Processing	2	
	19	3		
	20	Memory Organisation: Memory Hierarchy, Main Memory	1	
	21	Associative Memory, Cache Memory Mapping	4	
	22	IO Organisation: Modes of transfer: programmed IO, Interrupt initiated IO, DMA (Concepts Only)	2	
V	Op	en Ended Module: Computer Arithmetic & Types of Instruction	12	
	1	Computer Arithmetic: Addition and Subtraction, Multiplication Algorithms, Division Algorithms	7	
	2	Examples for Memory Reference, Register Reference, Input Output Instructions, Data Transfer Instructions, Data Manipulation Instructions, Arithmetic Instructions, Logical and Bit Manipulation Instructions, Shift Instructions, Program Control Instruction, Conditional Branch Instructions  Subroutine Call and Return	5

## **Detailed Syllabus:**

Module	Un	Content	Hrs	Marks
	it		(45+30)	(70)
I	In	troduction to Operating Systems & Process Management	10	15
	1	Operating System: History, Types, Objectives and Functions	2	
	2	Process Concepts: Process States, Process Control Block	2	
	3	Types of Process Schedulers and Operations on Process	2	
	4	Co operating Processes	2	
	5	Inter Process Communication	2	
II	(	CPU Scheduling, Process Synchronisation and Deadlocks	15	20
	6	Basic Scheduling Concepts, Scheduling Criteria	1	
	7	CPU Scheduling Algorithms	2	
	8	Process Synchronisation: Critical Section	2	
	9	Semaphores	2	
	10	Classical Problems of Synchronisation: Reader Writer, Dining Philosopher	2	
	11	Introduction to Deadlock: Necessary Conditions, Resource Allocation Graph	2	
	12	Handling Deadlocks: Prevention, Avoidance, Detection & Recovery	4	
III		Memory Management Techniques	10	20
	13	Basic Concepts: Physical VS Logical Address, Continuous Memory Allocation	2	
	14	Fragmentation Problem and Solutions	1	
	15	Non contiguous Memory Allocation: Paging	2	
	16	Non contiguous Memory Allocation: Segmentation, Segmentation with Paging	2	

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

# - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P)

Metacognitive Knowledge (M)

	17	Virtual Memory Concepts: Demand Paging and Page	3	
		Replacement Algorithms, Thrashing		
IV		Linux Shell Programming	10	15
	18	Introduction: Types of Linux Shells, File	2	
		Directory & File Management Commands:ls,		
		cd,pwd,mkdir,rm,cp,mv, chmod,touch		
		Input/Output Commands: read, echo,		
		Text Processing Commands: grep, cat		
	19	Piping and Redirection operators:  ,>,<,>>,<<	2	
		Arithmetic, Logical and Relational Operator		
	20	Iterative and Conditional Commands: if, while, for, break,	2	
		continue, case	_	
	21	Arrays and functions	2	
	22	Command line arguments, Network commands: ipconfig,	2	
		ping, date and time commands, Informative commands:		
		random, w, ps, free, uptime	20	
V		Practical Applications using Linux Shell Programming	30	
		Implement the following:	30	
		1. Write a Shell Script to find the roots of a quadratic		
		equation.		
		2. Write a shell script for a menu driven program to		
		perform file management (File creation, display		
		content, remove, write content to a file).		
		3. Write a shell script to count no of line, words and		
		characters of an input file.  4. Write a shell script to find the average of the number		
		entered as command line arguments.		
		5. Write a shell script to copy the contents of file to		
		another. Input file names through command line. The		
		copy should not be allowed if second file exists.		
		6. Write a shell script to check network connectivity.		
		7. Write a shell script that analyzes a log file, extracting		
		and summarizing relevant information such as error		
		counts ,warning messages, info and debug messages		
		using grep command.		
		8. Write a shell script to display current date and time, list		
		all user account names, count of logged in user		
		accounts, list all logged in user accounts with login		
		time.		
		9. Write a simple game script using random function to		
		implement number guessing game.		
		10. Write a shell script to display your system details		
		(number of users, current processes, memory usage,		
		system running time).		
		11. Write a shell script to implement and examine the		
		effectiveness of the First Come First Serve CPU		
		Scheduling algorithm. Find the average waiting time		
		and turnaround time.		
		12. Write a shell script program to implement Inter Process		
		Communication.

Understanding of conditionals, function	<ol> <li>Understanding of basic mathematical concepts such as sets, functions, relations, logic and discrete structures.</li> <li>Understanding of fundamental programming constructs such as loops, conditionals, functions, and recursion.</li> </ol>						
Course Summary	This course covers a comprehensive exploration of fundamental concepts in computer science, delving into computational models, formal language theory, and computational complexity. Students learn about various computational models such as finite automata, pushdown automata, and Turing machines, gaining insights into their capabilities and limitations. Through the study of formal languages and grammars, students understand the structure and properties of regular and context-free languages.

V	Pract	tical Activities	30				

Following are some of the suggested practical activities.

1.Temperature and Humidity Monitoring System:

Use sensors to measure temperature and humidity. Connect the sensor to Arduino or Raspberry Pi and send the data to a cloud platform. Visualize the data in real-time on a web dashboard.

#### 2. Smart Home Automation:

Control home appliances such as lights, fans etc. using Arduino or Raspberry Pi. Interface relay modules or solid-state relays with the microcontroller to control the appliances remotely. Use MQTT protocol for communication and control the devices via a mobile app or web interface.

#### 3. Weather Station:

Build a weather station using sensors like BMP180 or BME280 for measuring temperature, pressure, and altitude. Interface the sensors with Arduino or Raspberry Pi and log the data to a cloud platform. Display weather data on an LCD screen or visualize it on a web dashboard.

#### 4. Smart Plant Monitoring System:

Monitor the soil moisture level, light intensity, and temperature to create a smart plant monitoring system. Use sensors like soil moisture sensors, LDRs, and temperature sensors with Arduino or Raspberry Pi. Send notifications to users when plants need watering or when light conditions are inadequate.

#### 5. Home Security Camera System:

Build a home security camera system using Raspberry Pi and a USB webcam or Raspberry Pi Camera Module. Stream live video footage over the network and access it remotely using a web browser or mobile app. Implement motion detection algorithms to trigger recording or notifications.

	Or	ne following problems mathematically.  mplement these problems using Python.		
	1	<ul> <li>Linear Algebra</li> <li>Concepts to be learned:-</li> <li>Vector arithmetic</li> <li>(a) Define a vector a and b with the length of 3 and the integer values 1, 2 and 3.</li> <li>(b) Perform addition, subtraction, multiplication, division and dot product of the two vectors a and</li> </ul>	1	

2	Linear Algebra	1	
	Concepts to be learned: -		
	Matrix arithmetic		
	(a) Create two 2 row, 3 column matrices, say A and		
	B. Perform matrix addition, subtraction, division		
	and multiplication (element-wise matrix		
	multiplication or the Hadamard product).		
	(b) Create a matrix A with 3 rows and 2 columns, and		
	a matrix B with 2 rows and 2 columns. Perform		
	matrix dot product of matrices $A$ and $B$ .		
3	Linear Algebra	2	
	Concepts to be learned: -		
	Singular Value Decomposition		
	Orthogonal Matrices		
	Diagonal Matrix		
	Singular Value		
	Eigen values and Eigen Vectors		
	Matrix Multiplication		
	Find the singular value decomposition of the matrix		
	[2 2		
	-1 1]		
4	<b>Basic Statistics</b> Concepts to be learned: - Measures of Central Tendency - Mean, Median,	1	
	ModeFind the mean, the median, and the mode		
	for the number of vehicles owned in a s		
	survey of 52 households.		
	x         0         1         2         3         4         5         6         7		
	f 2 12 15 11 6 3 1 2		
	f 2 12 15 11 6 3 1 2		

5	<b>Basic Statistics</b>			1	
	Concepts to be lea	rned: -			
	• Measures of Di	ispersion - Rang	e, Variance,		
	Standard Devia	ation			
	Find the range,	the variance	and the standard		
	deviation for the	sample of ten IC	Q scores randomly		
	selected from a	school for ac	ademically gifted		
	students.				
	142 152 138 145	5 148 139 147	155 150 153		
6	Application of Pr	obability		1	
	Concepts to be lea	rned: -			
	Probability bas	ics			
	Combinations				
	Mutually exclu	sive events			
	Complementary	y events			
	Of 10 girls in a cla	ss, 3 have blue	eyes. If two of the		
	girls are chosen at random, what is the probability				
	that (i) both have blue eyes, (ii) neither has blue				
	eyes, (iii) at least	one has blue eye	s?		
7	Application of Pr	obability		1	
	Concepts to be lea	rned: -			
	Probability Bas	sics			
	Contingency Ta	ables			
	Marginal and J	oint Probabilities	S		
	Conditional Pro	obability			
	The following two	-way contingen	cy table gives the		
	breakdown of the	population in a p	particular locale		
	according to age a				
	Age Tobacco Use				
		Smoker	Non-smoker		
	Under 30	0.05	0.20		
	Over 30	0.20	0.55		
<u> </u>				1	

	1	I	I	
		A person is selected at random. Find the probability of each of the following events.  (a) The person is a smoker.  (b) The person is under 30.  (c) The person is a smoker who is under 30.		
	8	Application of Probability	1	
		Concepts to be learned: -		
		• Understand the characteristics of a normal distribution.		
		Calculating and interpreting z-scores.		
		Suppose the heights H of 800 students are normally		
		distributed with mean 66 inches and standard		
		deviation 5 inches. Find the number N of students		
		with heights		
		(a) between 65 and 70 inches,		
		(b) greater than or equal to 6 feet(72inches).		
	9	Application of Probability	1	
		Concepts to be learned: -		
		Bayes' Theorem		
		A patient goes to see a doctor. The doctor performs a		
		test with 99 percent reliabilitythat is, 99 percent of		
		people who are sick test positive and 99 percent of		
		the healthy people test negative. The doctor knows		
		that only 1 percent of the people in the country are		
		sick. If the patient tests positive, what are the chances		
		the patient is sick?		
	10	Sampling and Hypothesis Testing	1	
		Concepts to be learned: -		
		Hypothesis testing		
		Contingency tables, and		
		Chi-square analysis		
1				1

	A die is suspected of being biased. It is rolled 25		
	times with the following result:		
	Outcome Frequency		
	1 9		
	2 4		
	3 1		
	4 8		
	5 3		
	6 0		
	Conduct a significance test to see if the die is biased.		
	(a) What Chi Square value do you get and how		
	many degrees of freedom does it have?		
	(b) What is the p value?		
11	Sampling and Hypothesis Testing	1	
	Concepts to be learned: -		
	Central Limit Theorem		
	Sampling distribution of the Sample Mean		
	Standard Error of the Mean		
	• Z-score		
	Normal Distribution Properties		
	Probability Calculation		
	Suppose scores on an IQ test are normally distributed,		
	with a mean of 100. Suppose 20 people are randomly		
	selected and tested. The standard deviation in the		
	sample group is 15. What is the probability that the		
	average test score in the sample group will be at most		
	110?		
<u> </u>

Programme	B.Sc. Computer Science	B.Sc. Computer Science						
Course Title	Introduction to Data Warehousing and Big Data							
Type of Course	Elective							
Semester	VI							
Academic Level	300 - 399							
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours			
	4	4	-		60			
Pre-requisites	<ol> <li>Data Science C</li> <li>RDBMS</li> </ol>	Concepts						
Course Summary	This course provides insight into the basic concepts of data warehousing and its architecture. The various OLAP operations are also discussed in this syllabus to understand the summarisation and retrieval of the data. The fundamentals of big data technology are also introduced in this syllabus following the data warehousing concepts. An overview of the storage, retrieval and processing of big data is also provided here.							

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Understand the concepts of data warehouse and its architecture	U	С	Instructor-created exams / Quiz
CO2	Analyse the differences between OLTP and OLAP operations	An	С	Instructor-created exams / Quiz
CO3	Understand the various operations performed in the data warehouse to process the data	Ŭ	С	Modelling Assignments/ Case Studies
CO4	Understand Big Data and the importance of cloud and distributed computing in the real world	U	С	Instructor-created exams / Quiz
CO5	Understand the Map Reduce concepts of the jobs	Ŭ	С	Modelling Assignments/ / Case studies
CO5	Understand the Hadoop ecosystem	U	С	Instructor-created exams / Quiz

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

<sup>#</sup> - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

Module	Unit	Content	Hrs	Ma rks		
I	Introd	luction to Data Warehousing	8	10		
	1	Overview of databases and need for normalisation. Databases vs data warehouse	2			
	2	Introduction to Data warehousing, Need for data warehousing	2			
	3	Architecture of data warehousing	3			
	4 Data Marts vs Data Lakes					
II		epts and techniques in Data Warehousing	13	20		
	6	Data warehouse Schema - Stars, snowflakes and fact constellations	3			
	7	OLAP (Online analytical processing) definitions// Difference between OLAP and OLTP	2			
	8	Dimensional analysis - What are cubes?	2 2			
	9 Drill-down and roll-up - slice and dice or rotation					
	10	OLAP models, ROLAP versus MOLAP	4			
III	Big D	ata Technology	16	25		
	11	Fundamentals of Big Data, 3V's of big data. Structured Data and its sources; Unstructured data and its sources; integrating data types to big data	2			
	12	Big Data Stack: Layers 1 to 4; Big data analytics and applications	4			
	13	Role of Distributed computing and virtualizations in big data	3			
•	14	Hypervisor and implementing virtualizations in big data	1			
	15	Cloud in big data; cloud deployment models	2			
	16	Cloud delivery models; advantages of using cloud	2			
	17	Cloud Providers for Big Data	2			
IV	Big D	ata Management	11	15		
	18	Fundamentals of Map Reduce: Map and reduce functions	2			
	19	Putting Map and Reduce together	2			
	20	Hadoop: Name nodes, Data Nodes, Hadoop MapReduce	3			
	21	Hadoop ecosystem: Yarn, HBase and Hive Interactive tools: Pig, Pig Latin, SQOOP, ZooKeeper	4			
	22	Big Data Analytics: Basic, Advanced, Operationalized	1			
V	Open 6	ended module - Hands-on data and Data warehousing: Practical Applications, Case Study and Course Project	12			
	1	Data warehousing case studies	4			
	2	Case studies on Big Data Analytics and Big Data Solutions in the Real World	5			
	3	Assignments on Security in Big Data Environments	3

Module	Unit	Content	Hrs	Ma rks
I	Array	rs, Matrix manipulation using NumPy	10	12
	1	Array creation, sorting, concatenating	2	
	2	Shape and size of an array, basic arithmetic operations on an array, broadcasting	2	
	3	Aggregate functions on arrays, Unique and count operations	2	
	4	Matrices using NumPy	2	
	5	Transpose, reverse, flatten and ravel	2	
II	Data A	Analysis and Manipulation using Pandas	12	18
	6	Series - constructing from an array, using explicitly defined indices, using a dictionary.	2	
	7	Data Frame - constructing from arrays, dictionaries, structured arrays, and series, Indexing of data frames	3	
	8	Arithmetic and Binary operations on Data frame	3	
	9	Broadcasting operations	2	
	10	Universal functions, melt() and pivot()	2	
III	Other	Python packages for data science	10	14
	11	Scipy, Scikit-learn, PyTorch, Seaborn, Scrapy, and Beautiful Soup.	3	
	12	Python Data Operations: Importing and Exporting Data, Data Cleansing	3	
	13	Processing CSV Data, Processing JSON Data, Processing XLS Data.	2	
	14	Data Analysis: Measuring Central Tendency, Measuring Variance, and Correlation in Python	2	
IV	Tenso	rFlow Fundamentals	16	26
	15	Tensors, creation of tensors and random tensors, Tensors from the Normal distribution, Poisson distribution, set_seed()	2	
	16	Tensor attributes, size, rank and reshaping of a tensor	2	
	17	Tensor arithmetic, relational, logical operations. Shuffle()	2	
	18	Reduce operations on tensor Dimension-wise	2	
	19	Ragged tensors, TensorArray, dynamic arrays,	2	

	20	unique(), fill(), concat(), gather(), ones(), ones_like(), zeros(),	2	
	21	eye(), range(), repeat, reverse(), roll(), slice(), sort(),	2	
	22	split(),squeeze(), tile(), stack(), unstack(), tensordot()	2	
V	0	pen ended module - Hands-on Data Structures:	12	
		<b>Practical Applications, Case Study and Course Project</b>		
	1	Use Pandas and NumPy to efficiently process and analyze CSV, Excel, or JSON data	4	
	2	Create compelling visual insights using Matplotlib, Seaborn, or Plotly	3	
	3	Case studies with Tensor flow	5

Programme	B. Sc. Computer Scie	nce				
Course Title	System Software					
Type of Course	Elective					
Semester	VIII					
Academic Level	400 - 499					
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours	
	4	4	_	-	60	
Pre-requisites	13. Introduction t 14. Data Structure 15. Computer Org	es and Algori	thms	re		
Course Summary	With an emphasis on the creation and use of system software, this course examines the ideas and methods of system programming. Compiler design, system calls, loaders and linkers, and debugging methods are among the topics covered.					

CO	CO Statement	Cognitive	Knowledge	Evaluation
CO1	Define the key concepts in system programming, such as compilers, assemblers, linkers, and loaders. Identify the various stages in the compilation process and understand the purpose of each stage.	Level* U	Category# C	Instructor- created exams / Quiz
CO2	Master different types of system calls and their role in system programming. Master the principles of lexical and syntax analysis in the context of compiler design. Master various linking and loading schemes	Ap	Р	Assignment / Seminar presentations/ Exams
CO3	Interpret and understand the process of debugging, including the use of debugging tools and techniques.	Ap	Р	Seminar Presentation / Group Tutorial Work/ Viva Voce
CO4	Analyze the impact of different optimization techniques in the compilation process. Evaluate advantages and disadvantages of various linking and loading schemes.	ט	С	Instructor- created exams / Home Assignments

CO5	Implement programs using system calls to perform various system-	Ap	Р	Writing assignments
	level tasks, such as file operations and process management			
CO6	Apply principles of compiler design to write a simple compiler using a programming language.	Ар	P	Case Study

Module	Unit	Content	Hrs							
I		Introduction to System Programming & Assemblers (18 Marks)	14							
	1	Introduction to System Programming- Goals of System Software, System Programs and Systems Programming	3							
	2	Language Processors- Overview, Kinds of Language processors, language processing activities, program execution	4							
	3	System Tables Assemblers- Elements of Assembly Language Programming								
	4	•								
	5	Design of two pass assembler	4							
II		Macros and Macro Processors (16 Marks)	10							
	6 Introduction to macros and macro processors- macro definition and call, macro expression									
	7	Nested macro calls	2							
	8	Design of macro processor	4							
III		Linkers and Loaders, Scanning and Parsing (16 Marks)	10							
	9	Relocation and linking concepts	2							
	10	Design of linkers	2							
	11	Self locating program	2							
	12	Loaders- absolute loader, relocating loader	4							
IV		Compilers, System calls and libraries (20 Marks)	14							
	13	Data structures used in compilers	1							
	14	Phases of a compiler – Introduction	1							
	15	Lexical Analysis (Scanning)	2							
	16	Syntax Analysis (Parsing)	2							
	17	Semantic Analysis	1							
	18	Intermediate code generation	1							
	19	Code optimisation- optimisation transformation, local optimisation, global optimisation, Code Generation	2							
	20	Passes of Compiler	1							
	21	System calls and their implementation	1							
	22	Standard C library functions for system calls	2							
V		Open Ended Module: Case Studies	12							
	1	Case studies of lexical and syntax analyzers: LEX and YAAC.      Systam are grown wing system calls.								
		System programs using system calls

		Detailed Syllabus		
Module	Unit	Content	Hrs (48+12)	Mark
I		Introduction to Fuzzy Logic	8	10
	1	Overview of Fuzzy Logic	1	
	2	Fuzzy Sets and Membership Functions	2	
	3	Fuzzy Operations (Union, Intersection, Complement)	2	
	4	Basic principles of fuzzy logic.	2	
		Fuzzification and defuzzification.		
	5	Linguistic variables and terms.	1	
II		Fuzzy Inference Systems (FIS) and Fuzzy Logic Applications	12	20
	6	Mamdani FIS-Rule-based systems in fuzzy logic, Rule base and	2	
		implication methods.		
	7	Sugeno FIS-Structure and operation of Sugeno FIS.	2	
		Comparison with Mamdani FIS.		
	8	Basic structure of fuzzy logic controllers (FLCs)	3	
	9	Rule-based systems and fuzzy inference	3	
	10	Applications of fuzzy logic controllers	2	
III		Introduction to Expert Systems and Rule-Based Systems	12	20
	11	Definition and characteristics of expert systems.	2	
	12	Knowledge representation and reasoning.	3	
	13	Expert system components: knowledge base, inference engine, user	3	
		interface. Examples and applications of expert systems		
	14	Rule-based systems and production rules, Forward and backward chaining.	2	
	15	Inference mechanisms in expert systems, Examples of rule-based expert systems.	2	
IV		Introduction to SCILAB/MATLAB	16	20
		Programming		
	16	SCILAB/MATLAB environment and basic navigation, Variables, data types, and basic operations, Script files and running SCILAB/MATLAB code. Introduction to functions and function files.		
	17	Introduction to functions and function files, Conditional statements (if, else, elseif), Loop structures (for, while).		
	18	Logical operators and relational expressions, Vectorized operations and element-wise operations.		
	19	Introduction to arrays, matrices, and vectors, Cell arrays and structures, Indexing and slicing in SCILAB/MATLAB, Working with multidimensional arrays.	2	

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C) # - Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	20	Basic file input/output operations, Reading and writing data files (text, CSV, Excel), Data visualization using plotting functions.	2	
	21	Statistical analysis and plotting techniques, Fuzzy logic toolbox in SCILAB/MATLAB.	2	
	22	Expert system development tools in SCILAB/MATLAB, Building expert systems using SCILAB/MATLAB.	3	
V		Open end	12	
		Case Studies: Real-world applications and their impact.  Technological Challenges: Addressing the limitations and exploring new solutions.  Future Prospects: Predictions and potential advancements in the field.

Programme	B. Sc. Computer Science	ee			_	
Course Title	Foundations of C Progra	amming				
Type of Course	Minor					
Semester	II					
Academic Level	100-199					
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours	
	4	3	-	2	75	
Pre-requisites	Basic Computer Literacy     Basic Problem-Solving Skills					
Course Summary	This course teaches the basics of programming using the C language. C is a powerful and widely used programming language known for its efficiency and flexibility. Through this course, students will learn how to write, understand, and debug C code to solve various problems and build simple applications.					

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Demonstrate a solid understanding of fundamental programming concepts	An	P	Instructor-created lab exams / Quiz
CO2	Develop effective problem-solving skills by applying algorithmic thinking and logical reasoning.	An	P	Problem-solving assessments
CO3	Gain proficiency in writing, compiling, debugging, and executing C programs to implement algorithms, solve	Ap	P	Modeling Assignments

	problems, and create applications.			
CO4	Learn techniques to write efficient and optimized C code, including memory management, algorithm design, and performance tuning, to produce high-quality and scalable software solutions.	Ap	P	Modeling Assignments/ / Case studies
CO5	Understand and apply software development practices such as modular programming, code documentation, and debugging techniques to write maintainable and robust C programs.	Ap	P	Modeling Assignments/ / Case studies
CO6	Develop critical thinking skills by analyzing and evaluating C code, identifying errors and inefficiencies, and proposing solutions to improve code quality and performance.	Ap	P	Hands-on exercises

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

Module	Unit	Content	Hrs	Marks
I	Probl	em-solving and logical Thinking	10	15
	1	Overview of computational thinking concepts. Definition of	2	
		algorithm and its characteristics. Understanding the importance of algorithms in problem-solving		
	2	Algorithm Development: Steps involved in designing algorithms	2	
	3	Pseudocode as an intermediate step in algorithm development.	1	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	4	Understanding flowchart symbols and their meanings. Learning to	2	
		represent algorithms using flowcharts.		
	5	Raptor as a precursor to text-based programming languages	2	
	6	Drawing simple flowcharts	1

	2	Comments, Indentation, Identifiers, Keywords, Variables	2	
	3	Standard Data Types	2	
I	4	Input Output Functions, Import Functions, range function	1	
	5	Operators and Operands, Precedence of Operators, Associativity	2	
	6	Type Conversion, Multiple Assignment	1	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	7	Expressions and Statements, Evaluation of Expressions	1		
	8	Boolean Expressions	1		
	Control Struct	ures	12	20	
	9	Decision Making- if statement, ifelse statement, ifelifelse statement, Nested if statement	5		
	10	Loops - for loop, for loop with else, while loop, while loop with else, Nested Loops	5		
П	11	Using indentation in Python to define code blocks	1		
	12	Control Statements- break, continue, pass	1		
	Data Structure	es in Python	12	20	
	13	Working with strings and string manipulation	3		
	14	List - creating list, accessing, updating and deleting elements from a list	2		
	15	Basic list operations	1		
	16	Tuple- creating and accessing tuples in python	2		
	17	Basic tuple operations	1		
Ш	18	Dictionary, built in methods to create, access, and modify key-value pairs			
	19	Set and basic operations on a set	1		
	Functions		9	15	
IV	20	Built-in functions - mathematical functions, date time functions, random numbers	1		
	21	Writing user defined functions - function definition, function call, flow of execution, parameters and arguments,	6		
		return statement			
	22	Recursion.  Introduction to basic Python libraries (e.g., math, random)	2		

	Hands-on D	ata Structures:	30			
	Practical Applications, Case Study and Course Project					
Design	programs from	the concepts listed below. Select the topics and programs suited				
for you	ır domain					
		Programs to:				
V	1	• Run instructions in Interactive interpreter and as Python Script				
•		<ul> <li>Perform calculations involving integers and floating point numbers using Python arithmetic operators</li> </ul>				
		Data Structures in Python				
		String - Create a string , Indexing / Looping / Slicing				
		• Lists - Create a list , Indexing /Looping				
		/ Slicing , Adding items / Modifying items / Removing items				
		• Tuples - Create a tuple, Indexing / Looping / Slicing / Adding items to a tuple				
		Dictionary - Create a dictionary and access values with key / Adding a key- value pair / Adding to an empty dictionary /Modifying values in a dictionary / Removing key-value pair				
		Function				
		Call functions residing in the math module				
		Define a function for later use				
		Pass one or more values into a function				
		Return one or more results from a function				
		Case study:				
		Create a Todo List Manager where Users should be able to add, remove, and view tasks				
		<ul> <li>Create Student Grade Tracker: Allow users to add students, add grades for subjects, and calculate average grades.</li> </ul>

Programme	B. Sc. Computer Science						
Course Title	Introduction to Data Science						
Type of Course	Minor						
Semester	П						
Academic Level	100-199						
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours		
	4	3	-	2	75		
Pre-requisites	Python Prograi     Linear Algebra	nming		,			
Course Summary	This course provides a comprehensive overview of data science, covering the various types of data and their applications.  The students will acquire a deep understanding of exploratory data analysis along with hands-on implementation skills. The curriculum introduces both supervised and unsupervised and techniques of Machine learning.  Additionally, the data pre-processing techniques are introduced Overall, the course provides a comprehensive understanding of the fundamental data science principles, guiding students through the data science process and illustrating practical applications.						

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Understand the types of data and the applications of data science	U	С	Instructor-created exams / Quiz

Module	Unit	Content	H rs	Marks
	Introduction	to Python	1 2	17
	1	Features of Python, Different methods to run Python, Python IDE	2	
	2	Comments, Indentation, Identifiers, Keywords, Variables	2	
ı	3	Standard Data Types	2	
1	Input Output Functions, Import Functions, range function		1	
	5	Operators and Operands, Precedence of Operators, Associativity	2	
	6	Type Conversion, Multiple Assignment	1	
	7	Expressions and Statements, Evaluation of Expressions	1	
	8	Boolean Expressions	1	
	Control Struc	ctures	1 2	19
	9	Decision Making- if statement, ifelse statement, ifelse statement, Nested if statement	5	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	2	Built-in functions - mathematical functions, date time functions,	1	
	Functions		9	15
	19	Set and basic operations on a set	1	1
	18	create, access, and modify key- value pairs		
	17	Basic tuple operations  Dictionary, built in methods to	2	
	16	in python  Regio tuple operations	1	
		2		
III	15	from a list  Basic list operations	1	
	14	List - creating list, accessing, updating and deleting elements	2	
	13	Working with strings and string manipulation	3	
	Data Structui	•	2	
		pass	1	19
	12	code blocks Control Statements- break, continue,	1	
	11	Nested Loops Using indentation in Python to define	1	
II	10	Loops - for loop, for loop with else, while loop, while loop with else,	5	

Design programs from the concepts listed below. Select the topics and programs suited for your domain

V	<ul> <li>Read input, include casting that input to the appropriate type</li> <li>Select from one of several alternatives by using an if-elif or if-elif-else statement</li> <li>Use the range() function in a form loop</li> <li>Call and use functions residing in the math module</li> </ul>
	<ul> <li>Design a basic calculator application in Python that can perform addition, subtraction, multiplication, and division.</li> <li>Create a Python program that retrieves weather data from an API (e.g., OpenWeatherMap) and displays it.</li> </ul>
1	Data Structures in Python  • String - Create a string , Indexing / Looping / Slicing

	Data Structures in Python	
	• String - Create a string,	
	Indexing / Looping / Slicing	
	Lists - Create a list , Indexing	
	/Looping	
	/ Slicing, Adding items /	
4	Modifying items / Removing	
	items	
	Tuples - Create a tuple , Indexing /	
	Looping / Slicing / Adding items	
	to a tuple	
	Dictionary - Create a dictionary and	
	access values with key / Adding a	
	key- value pair / Adding to an	
	empty dictionary /Modifying values	
	in a dictionary / Removing key-	
	value pair	

5	<ul> <li>Function</li> <li>Call functions residing in the math module</li> <li>Define a function for later use</li> <li>Pass one or more values into a function</li> <li>Return one or more results from a function</li> <li>Call a function that you have defined previously</li> </ul>

Programme	B. Sc. Computer Science					
Course Title	Computer Essentials with Word Processing & Presentation					
Type of Course	Minor					
Semester	I					
Academic Level	100-199					
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours	
	4	3	-	2	75	
Pre-requisites	1. Fundamental Mathe	ematics Conce	pts: Number	System		
Course Summary	This course serves as an introductory exploration into the foundational concepts of computing. Through a combination of lectures, hands-on exercises, and practical assignments, participants develop a holistic understanding of computer fundamentals. Ultimately, this course serves as a cornerstone for further studies in computer science, information technology, and related disciplines, empowering learners to navigate and contribute to the ever-evolving landscape of computing.					

## Course Outcomes (CO):

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Gain proficiency in understanding and representing data in various forms, including binary, decimal, hexadecimal, and character encodings.	Ар	F	Instructor-created exams / Quiz
CO2	Understand the basic principles of computer architecture and organization	U	С	Assignment / Demonstrations
CO3	Understand the concept of software and its significance in computing and be familiar with various types of software, including system software, application	U	С	Seminar Presentation / Group Tutorial Work

	software, and utility software.			
CO4	Understand the basic principles of document design and layout for enhanced readability and visual appeal	Ар	Р	Hands-on practical sessions
CO5	Understand the importance of effective communication and visual aids in presentations.	Ар	Р	Hands-on practical sessions
CO6	Acquire practical skills through hands-on exercises and projects, preparing participants to apply their knowledge in academic, professional, and personal contexts.	Ар	P	Hands-on practical sessions

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

Module	Unit	Content	Hrs	Marks
I	Intro	10	20	
	1	Introduction to Computers: Generation, Classification, Characteristics of Computers, Significance	2	
	2	Number Systems :Binary, Decimal, Octal, Hexadecimal.	2	
	3	Conversion from one base to another	3	
	4	Computer Codes: BCD Code, Excess 3 Code, ASCII Code, Unicode, Gray Code	3	
II	Basic	Computer Organization	10	20
	5	CPU organisation :Arithmetic and Logic Unit, Control Unit	1	
	6	Memory hierarchy: Registers, Cache, Primary Memory, Secondary Memory	2	
	7	Primary Storage: RAM(SRAM, DRAM), ROM(Masked ROM, PROM,EPROM,EEPROM)	2	
	8	Secondary storage: SSD,HDD, Magnetic tapes, Disk Storage	2	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	9	Input/Output Unit:- Input Device: Keyboard, MouseTouchpad, Trackball, Scanner, Graphics Tablet, Microphone, Webcam, Joystick/Gamepad, Biometric Input Devices Output Devices: Monitor/Display, Printer, Projector, Speakers, Headphones, Plotter	3	
Ш	Unde	erstanding Softwares	10	20
	10	Introduction to Software (Definition and Importance of Software, Types of Software-System software, Application Software, Prop oratory vs Open source)	2	
	11	Operating Systems (Introduction to Operating Systems, Common Operating Systems, User Interfaces)	2	
	12	Device Drivers and Utilities ( Device Drivers , System Utilities ,Productivity Software ,Multimedia Software)	2	
	13	Computer languages (Machine, Assembly and HighLevel), Language Translator- Assembler, Compiler, Interpreter	2	
	14	Security Software and Best Practices(Antivirus Programs ,Firewalls and Security Suites,Best Practices for Software Security )	2	
IV	Intro	duction to Word Processing & Presentation	15	10
	15	Basics of Word Processing: Creating, Opening, Saving, and Closing Documents, Text Entry and Formatting (Font, Size, Color), Paragraph Formatting (Alignment, Spacing), Copying, Cutting, and Pasting Text, Spell Check and Grammar Check)	2	
	16	Advanced Word Processing Techniques (Styles and Templates, Tables and Graphics (Inserting, Formatting), Headers and Footers, Page Layout (Margins, Orientation), Document Views (Print Layout, Draft, Outline	2	
	17	Advanced Graphics and Multimedia(SmartArt and Shapes , Customizing SmartArt and shapes,Embedding and Linking Media,Advanced techniques for embedding and linking images, audio, and video)	2	
	18	),Document Collaboration (Track Changes, Comments),Mail Merge for Personalized Documents)	1	
	19	Introduction to Presentation Software(Creating a New Presentation,  Slide Basics (Adding, Deleting, Rearranging),	2	
		Slide Layouts and Choosing Templates, Text Entry and Formatting		
		Inserting and Formatting Images and Shapes)		

	20	Enhancing Presentations with Multimedia (Inserting and Formatting Media	3	
		(Audio, Video), Transitions Between Slides, Master Slides for Consistent		
		Formatting, Design and Themes for Visual Appeal)		
	21	Animations for Text and Objects (Slide Show Setup (Timings, Rehearsal)	2	
	22	Effective Presentation Delivery (Tips for Engaging Presentations, Presenter	1	
		View and Speaker Notes, Handling Q&A Sessions, Dealing with Technical		
		Issues, Customizing Presentations for Different Audiences, Printing and Exporting Slides		
v	Hand	s-on Word Processor and Presentation Tool:	30	
	Practi	ical Applications, Case Study and Course Project		
		Identification and familiarization of Hardware Components	5	
		(Processor, RAM,ROM, Peripheral devices, SSD, HDD, SMPS, Motherboard, Ports)		
		Microsoft Word:	20	
		1. Document Formatting:		
		<ul> <li>Create a new document, set margins to 1 inch, and change</li> </ul>		
		the page orientation to landscape.		
		<ul> <li>Apply a consistent font style, size, and color to the entire document.</li> </ul>		
		2. Paragraph Formatting:		
		<ul> <li>Create a bulleted or numbered list with at least three items.</li> <li>Adjust the indentation and line spacing for a specific</li> </ul>		
		paragraph.  3. Headers and Footers:		
		<ul> <li>Insert a header with the document title and page number on the right.</li> </ul>		
		<ul> <li>Add a footer with the date aligned to the center.</li> </ul>		
		4. Tables and Graphics:		
		<ul> <li>Create a table with four columns and three rows.</li> </ul>		
		Insert an image into the document and adjust its position.		
		5. Styles and Themes:		
		<ul> <li>Apply a heading style to a section of text.</li> </ul>		
		Change the document theme to give it a different look.		
		Microsoft PowerPoint:		

		I
6. Slide Creation:		
<ul> <li>Create a new PowerPoint presentation and add five slides.</li> </ul>		
<ul> <li>Apply different slide layouts to each slide.</li> </ul>		
7. Text and Object Formatting:		
<ul> <li>Add a title to the first slide and format it with a unique font and color.</li> </ul>		
<ul> <li>Insert a shape and customize its fill and outline colors.</li> </ul>		
8. Transitions and Animations:		
<ul> <li>Apply a slide transition between the first and second slides.</li> </ul>		
<ul> <li>Add an entrance animation to a text box on the third slide.</li> </ul>		
9. Master Slides:		
<ul> <li>Customize the master slide with a background color or</li> </ul>		
image.		
<ul> <li>Add a placeholder for slide numbers in the master slide.</li> </ul>		
10. Delivery and Export:		
<ul> <li>Set up presenter view for a slideshow.</li> </ul>		
Export the presentation as a PDF document		
Case Study: Exploring feature of PowerPoint to enhance presentation skill	5

,	basic concepts in web I	•			_			

### Course Outcomes (CO):

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	To get general introduction to internet	U	С	
CO2	To identify and analyse the current trends in web designing	Ар	Р	
CO3	To understand basic knowledge in HTML5 and CSS3 for responsive web design	Ар	Р	
CO4	To learn how to design a simple web applications	Ар	Р	
CO5	To incorporate user experience principle in web design	Ар	Р	
CO6	To Enable student to become	Ар	Р	

proficient in web designing		
through current technologies		

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

Module	Unit	Content	Hrs
1	Introd	uction to Web Design (15 marks)	09
	1	Overview of Internet	1
	2	Over view of Internet Security	1
	3	Client Server System	1
	5	Websites and Digital Communication Tools	1
	6	Collaboration for Website Development	1
	7	Understanding the evolution of web design	2
	8	Exploring current design trends	1
	9	Overview of innovative websites	1
II	HTML	– Building the Foundation (18 Marks)	12
	10	Understanding the basic structure of web pages(Role of HTML,	
		basic concept of webpage, html document structure	2
		, <html>,<head>,<body>).</body></head></html>	
	11	Exploring tags, attributes, and their significance (font type, text	
		formatting tag, otrher text related tag, heading, paragraphs, list,	2
		link, image, common attributes like class, id, src, alt, href).	
	12	Creating interactive forms to collect user data(form element tag	
		like <form>,<input/>,<textarea>,&lt;select&gt;,&lt;button&gt;,various form&lt;/td&gt;&lt;td&gt;3&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;controls like text input, button, drodwonbox).&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;13&lt;/td&gt;&lt;td&gt;Designing and structuring tabular data.(Basic table structure tag,&lt;/td&gt;&lt;td&gt;2&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;colspan, rowspan)&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;14&lt;/td&gt;&lt;td&gt;Enhancing the meaning and structure of your&lt;/td&gt;&lt;td&gt;3&lt;/td&gt;&lt;/tr&gt;&lt;tr&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;td&gt;content(understanding semantic elements, benifit of semantic&lt;/td&gt;&lt;td&gt;&lt;/td&gt;&lt;/tr&gt;&lt;/tbody&gt;&lt;/table&gt;</textarea></form>	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

		HTML).						
III	CSS -	Styling Your Web Pages (18 Marks)	12					
	15	Introduction to CSS( understanding the concept of styling, presentation, basic synatx electors, properties and values, inline, internal and external style, different types of selectors)						
	Introduction to common CSS properties(color,font,text,margin, padding, border, background), CSS box model(margin, border, padding and content), positioning elementss (static, relative, absolute, fixed, z-index)							
	17	Introduction to layouts in web desigining, The role of responsive layouts, Flexbox layout model, creating Grid, Media queries and breakpoints	3					
	Transition properties(duration, timing function, property), CSS Animation, Adding interactive hover effect.  Overview of CSS frameworks and their benefits. Introduction to Bootstrap and its features.							
IV	JavaScript Essentials (19 Marks)							
	19	Overview of Javascript, declaring the variables and understanding data types. Object in Javascript, basic operations and control flow in Javascript	3					
	20	Understanding the Document Object Model (DOM). Using selectors to target HTML elements.  Modifying content, attributes, and styles dynamically. Using selector, content, attributes and styles dynamically. Creating and Deleting elements. Navigating through the DOM hierarchy.	3					
	21	3						
	22	Overview of JavaScript libraries and their benefits. Selecting elements, manipulating the DOM, and handling events with jQuery. Applying visual effects and animations with jQuery. Fade, slide, show/hide, and custom animations. Making asynchronous requests with jQuery. ajax().	3					
		Handling JSON data and updating the DOM dynamically.						

V	Hands-on Programming in Java(Using VSCode, Atom, Aptana Studio):							
	Practio	cal Applications, Case Study and Course Project						
	1	Implement the following:						
		Program for implementing html tags	20					
		Write program for implementing Style a paragraph	1					
		() to have a red color, a font size of 16px, and a bold font weight						
		3. Write a program to implement CSS Box Model	_					
		Create a simple layout using Flexbox, with three div elements aligned horizontally.	-					
		5. Implement a media query that changes the background color of a webpage when the screen width is less than 600 pixels.						
		6. Write a JavaScript function that changes the text content of an HTML element with the id "demo" to "Hello, World!" when a button is clicked.						
		7. Declare a variable in JavaScript and assign it a string value. Also, mention the data type of the variable.	_					
		Write a JavaScript program for attaching a click event to a button.						
		<ol> <li>Use JavaScript to make an asynchronous request to a JSON file and display the data on the webpage.</li> </ol>						
		10. Use JavaScript to perform AJAX operation	-					
	2	Case Study	2					
	3	<b>Project:</b> Build a web application for perform responsive web application.	8					
		аррисаноп.	8

Programme	B.Sc Computer Science				
Course Title	Mastering Content Management Systems				
Type of Course	Minor				
Semester	III				
Academic Level	200-299				
Course Details	Credit	Lecture	Tutorial	Practical	Total Hours
		per week	per week	per week	
•	4	3	-	2	75
Pre-requisites	Familiarity with web content management systems (CMS).				
	2. Basic knowledge of internet technologies provides a foundation for learning web design.				
Course Summary	The course covers fundamental web design concepts, including HTML and				
	CMS principles, and focuses on Drupal as a robust content management system. Students will learn to create and customise websites using Drupal,				
	exploring its features, such as content types, themes, and modules to build				
	dynamic and interactive web pages.				

# Course Outcomes (CO):

СО	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Cultivate a robust understanding of web design fundamentals, laying a strong foundation for their journey into the dynamic world of digital design and development.	U	С	Assignment / Instructor- created exams / Quiz
CO2	Attain comprehensive knowledge and practical proficiency in Content Management Systems (CMS), empowering to navigate and excel in the ever-evolving landscape of digital content creation and management.	U	С	Assignment / Instructor- created exams / Quiz

CO3	Develop expertise in Drupal, a widely used CMS platform, gaining comprehensive understanding of its features, configuration, and installation processes, thus preparing them for proficient and innovative web development endeavors.	Ар	P	Practical Assignment / Instructor- created exams / Quiz
CO4	Impart a comprehensive understanding of website development using Drupal and facilitate the acquisition of expertise across various options within the Drupal ecosystem.	Ар	P	Practical Assignment / Instructor- created exams / Quiz
CO5	Gain an understanding of how to apply web design concepts to real-world scenarios, effectively designing and developing functional and aesthetically pleasing websites utilizing the Drupal CMS.	С	Р	Practical Assignment / Instructor- created exams / Quiz
CO6	Develop proficiency in advanced website management skills, including installing and configuring modules, managing menus, and more, to effectively navigate and optimize the functionality of websites built on the Drupal platform.	С	P	Practical Assignment / Instructor- created exams / Quiz

	15	Three schema architecture of DBMS(External,Conceptual and internal)	1		
	16	Data Independence: Logical data independence and Physical data independence	2		
	17	17 Structure of Database Management System  18 Data models (Relational Model, Network Model.			
	18	5			
		c. The Hierarchical Model. Object-Oriented Model)			
IV		tured query language - Create, insert, select, update, delete, drop commands	10	16	
	19	DML	2		
	20	DDL	3		
	21	Constraints	2		
	22	Operators and functions	3		
٧	Pract	ical Applications, Case Study and Course Project	30		
	1	1. Create Database:	20		
		<ul> <li>Write a SQL query to create a new database in MySQL.</li> </ul>			
		2. Create Table:			
		<ul> <li>Create tables with various data types for columns such as INT, VARCHAR, DATE, etc.</li> </ul>			
		<ul> <li>Include constraints such as PRIMARY KEY, FOREIGN KEY, UNIQUE, NOT NULL, etc.</li> </ul>			
		3. Insert Data:			
		<ul> <li>Insert records into tables using the INSERT INTO statement.</li> </ul>			
		<ul> <li>Practice inserting data into tables with</li> </ul>			

different data types.

#### 4. Retrieve Data:

- Write SELECT queries to retrieve data from tables.
- Retrieve specific columns using SELECT.
- Filter rows using the WHERE clause.

#### 5. Update Data:

- Update existing records in a table using the UPDATE statement.
- Modify records based on specific conditions using the WHERE clause.

#### 6. **Delete Data**:

- Delete records from a table using the DELETE statement.
- Remove records based on specific conditions using the WHERE clause.

#### 7. Sorting and Filtering:

- Sort the result set using ORDER BY clause.
- Filter records using various conditions such as equality, comparison operators, and logical operators.

#### 8. Grouping and Aggregation:

- Group rows using GROUP BY clause.
- Use aggregate functions like COUNT(), SUM(), AVG(), MIN(), and MAX().

#### 9. String Functions:

- Use string functions like CONCAT(), SUBSTRING(), UPPER(), LOWER(), etc.
- Manipulate string data in SELECT queries.

#### 10. Date and Time Functions:

• Use date and time functions like DATE(),

NOW(), YEAR(), MONTH(), DAY(), etc.		
<ul> <li>Work with date and time data in SELECT queries.</li> </ul>		
11. Mathematical Functions:		
<ul> <li>Use mathematical functions like ROUND(),</li> <li>CEIL(), FLOOR(), ABS(), etc.</li> </ul>		
Perform mathematical operations on numeric data in SELECT queries.		
12. Conditional Functions:		
<ul> <li>Use conditional functions like IF(), CASE statement, etc.</li> </ul>		
Implement conditional logic in SELECT queries.		
Case study:	10	
Case study.	10	
Library Management System: Track books, borrowers, and transactions, facilitating library operations efficiently.		
Student Information System: Manage student records, courses, grades, and attendance for academic institutions.		
3. <b>Employee Database System</b> : Store employee details, salaries, and performance evaluations, streamlining HR processes for companies.

Design p	rograms from the	concepts listed below. Select the topics and program	s suited
for your			
		Program to demonstrate basic data	
		types in python	
		Program to demonstrate operators in python.	
		<ul> <li>A cashier has currency notes of denominations 10, 50, and 100. If the</li> </ul>	
		amount to be withdrawn is input	
V	1	through the keyboard using input ()	
		function in hundreds, find the total number of currency notes of each	
		denomination the cashier will have to	
		give to the withdrawer.	
		<ul> <li>Program to demonstrate list and tuple in python.</li> </ul>	
		A library charges a fine for every book	
		returned late. For first 5 days the fine is	
		50 paisa, for 6-10 days fine is one rupee and above 10 days fine is 5 rupees. If	
		you return the book after 30 days your	
		membership will be cancelled.	
		Write a program to accept the number	
		of days the member is late to return the	

	book and display the fine or the	
	appropriate message	
	Write a Program for checking whether	
	the given number is an even number or	
	not.	
	Write a Python program to print	
	Fibonacci series.	
	ribolided series.	
	Write function to compute gcd and lcm	
	of two numbers.	
	<ul> <li>Using a for loop, write a program that</li> </ul>	
	prints out the decimal equivalents of	
	1/2, 1/3, ¼.	
	M/rite a program to calculate evertime	
	<ul> <li>Write a program to calculate overtime pay of 10 employees. Overtime is paid at</li> </ul>	
	the rate of	
	the rate of	
	Rs.12.00 per hour for every hour worked	
	above 40 hours. Assume that employee	
	do not work for	
	fractional part of an hour	
	Write a function reverse to reverse a list	
	without using the reverse function.	
	without using the reverse function.

## **Detailed Syllabus:**

Module	Unit	Content	Hrs	Marks
I	Basic	Computer Organization and Concept of Hardware	11	17
	1	Basic Computer Organization: Input Unit, Storage Unit, Processing Unit, Control Unit, Output Unit	1	
	2	CPU Architecture: Arithmetic and Logic Unit, Control unit, Registers	1	
	3	Memory: Primary Memory, Secondary Memory	1	
	4	Access Time, Storage Capacity-bit, byte, nibble	1	
	5	Cache memory, Primary Memory- RAM (Static, Dynamic), ROM	2	
	6	Secondary Memory, storage devices (Magnetic tape, Hard disk, SSD and CD drive). Memory hierarchy.	3	
	7	Input and Output Devices	2	
II	Hard	12	18	
	8	Concept of Hardware and Software	1	
	9	Microprocessor, Clock Speed and Performance, Types of processors (Single core, dual core, multi core), GPU	2	
	10	Inside CPU: SMPS, Motherboard, Processor, Storage Devices (HDD, SSD), RAM (DDR2, DDR3, DDR4), ROM	2	
	11	Motherboard Components: Processor Slot, Cooling Fan, RAM, Expansion Slots (PCIe), Mouse and Keyboard Ports, Chipset, BIOS/UEFI Chip, SATA/NVMe Slots, Network Interface, Ports- Ethernet, VGA port, HDMI port, USB port	3	

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	12	Cables and Connectors,	2	
	12	Expansion Cards: Graphics card, Sound Card, Network Interface Card	1	
III	Hard	ware Assembling	10	17
	14	Safety and Tools: Introduction to ESD (Electrostatic Discharge) safety, use of antistatic wrist straps, and essential tools for assembling hardware	1	
	15	Assembling a PC: Step-by-step guide on assembling a PC, including installing processor onto the motherboard, Setup Cooling Fan, Install RAM, Install other expansion cards, Mounting the motherboard into the case and Install storage devices (HDD, SSD) into drive bays, Install the GPU into the appropriate PCIe slot (if not integrated into the CPU)	4	
	16	<b>Cable Management</b> : Best practices for managing cables within a PC case to ensure optimal airflow and aesthetics.	3	
		Connect power supply cables to the motherboard, CPU, GPU, and storage devices, Connect case cables (power switch, reset switch, LEDs, USB ports) to the appropriate headers on the motherboard,		
IV	Syste	m Configuration, OS Installation, trouble Shooting	12	18
	17	<b>BIOS and UEFI</b> : Understanding the roles of BIOS and UEFI navigating BIOS settings, and configuring hardware.	2	
	18	Installing and Configuring Operating Systems: Guidelines for installing operating systems (Windows, Linux)	2	
	19	<b>Installing Drivers</b> : install drivers for motherboard components (Chipset, LAN, Audio), GPU, and other peripherals.	2	
	20	Hardware Upgrades: How to upgrade components such as RAM, storage, and GPUs, including compatibility considerations.	2	
	21	Troubleshooting Common Assembly Issues: Identifying and resolving common issues encountered during PC assembly	2	
	22	<b>Diagnostics and Maintenance:</b> Introduction to methods, tools and software used for diagnosing hardware issues.	2	
V		Hands-on Hardware Assembling	30	
		Practical Applications, Case Study and Course Project		

1	1: Identifying Computer Components	25	
	<ul> <li>Identify and describe the function of the CPU, RAM, motherboard, PSU, storage devices, and peripheral connectors.</li> <li>Disassemble and reassemble a desktop computer, identifying each component as it is removed and replaced.</li> </ul>		
	2: Building a PC from Scratch		
	<ul> <li>Use appropriate tools and safety equipment to assemble a computer, including installing the motherboard, CPU, CPU cooler, RAM, and storage.</li> <li>Practice cable management to ensure a neat and efficient build.</li> <li>Document each step of the assembly process for future reference and learning.</li> </ul>		
	3: Operating System Installation and Configuration		
	<ul> <li>Install a chosen operating system (e.g., Windows, Linux) from a bootable USB drive or DVD.</li> <li>Install essential drivers and software updates.</li> <li>Configure basic settings (user accounts, network settings, display resolution).</li> </ul>		
	Case Study: Trouble Shooting and Maintenance

Programme	B. Sc. Computer Science						
Course Title	Exploring Cyber security in social media						
Type of Course	Minor						
Semester	II						
Academic Level	100-199						
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours		
	4	3	-	2	75		
Pre-requisites	1. Fundamentals	of Compute	r science				
Course Summary	Students can investigate the complex interplay between social media and cyber security with this minor programme. The course will explore the different risks, vulnerabilities, and dangers related to social media platforms, providing participants with valuable knowledge on how to safeguard both individuals and organisations. Students will get a thorough grasp of cyber security principles as they relate to social media through a combination of academic study, hands-on activities, and case analysis.						

# **Course Outcomes (CO):**

CO	CO Statement	Cognitive	Knowledge	Evaluation
		Level*	Category#	Tools used
CO1	Understand the idea of cyber security	U	F	Instructor-

	5	Application of Machine Learning: Healthcare, Finance, Self Driving Cars, Robotics	2	
II		Introduction to Block chain Technology:	12	20

<sup># -</sup> Factual Knowledge(F) Conceptual Knowledge (C) Procedural Knowledge (P) Metacognitive Knowledge (M)

	6	Cryptography Overview: Definition, Types of Cryptography -Public and Private Keys, Application -Digital Signature	3	
	7	Introduction to Block chain Technology: History of Block chain, Generic Elements of Block chain, Features of Block chain(Decentralization, Transparency, Immutability and Security)	2	
	8	Types of Block chain:	2	
	9	Applications of Bock chain Technology : Financial Services, Supply Chain Management, Smart Contracts	2	
	10	Crypto currencies: Definition, Bit coin, Ethereum	2	
	11	Challenges in Block chain Adoption: Scalability, interoperability, and regulatory concerns, Security considerations.	1	
III		IOT and Cloud Technology	10	15
	12	Overview of Computer Networks: Definition, types, and importance.	2	
	13	Network Design Concepts: ISO/OSI and TCP/IP	2	
	14	Networking Devices and Protocols: Routers, switches, Hub, Modems, TCP, UDP, IP.	2	
	15	Cloud Computing and Services: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS).	2	
	16	Internet of Things: Definition, Key characteristic, Architecture and components, Challenges and Security in IOT.	2	
IV		Unstructured Database	10	15
	17	Overview of traditional DBMS: Relational, Object- Oriented Database	3	
	18	Structured and Unstructured Database	1	
	19	Introduction to NoSQL databases	2	
	20	Types of NoSQL databases (Document-oriented, Key-value stores, Column-family stores, Graph databases)		
	21	Cloud-Based Database Services: Database as a Service (DBaaS) overview, Benefits of cloud-based solutions	2	

	22	Block chain Databases (2 hours): Understanding graph databases and their applications, Overview of Block chain databases and their role in data integrity.	2	
V		Practical Applications, Case Study	30	
	1	Identify the various software platforms for AI programming.		
		2. Identify the various platforms used for No-Code AI.(Google Cloud Auto ML, Microsoft Azure Al Buildeer, IBM Watson Studio etc)		
		3. Use chatbot platforms like ChatGPT or any other to engage in conversational interactions and understand how natural language processing works.		
		4.Use online tools or any applications that demonstrate image recognition capabilities.		
		5.Use online platforms or software that provide interactive AI demos and simulations, such as neural network visualisers or AI-powered character generators.		
		6.Use an online tool like CyberChef or an online RSA key generator to generate a pair of RSA public and private keys.		
		7. Create a digital signature for a given document using an online service like DocuSign or HelloSign, and verify it using the service's verification features.		
		8. Use online resources to create a comparison table for public, private, and consortium blockchains, including real-world examples.		
		9. Use MySQL or PostgreSQL to create a database, define tables, and perform CRUD operations.		
		10.Use db4o (Database for Objects) or an equivalent tool to create and manipulate an object-oriented database.		
		11. Use MongoDB to store and query unstructured data.		
		12. Use MongoDB to create a collection and perform CRUD operations.		
		13. Deploy and interact with a cloud-based database service.		

14. Explore and implement a basic blockchain database using an appropriate platform.	
15. Use BigchainDB or a similar blockchain database platform to create a blockchain database.

	13 Pivot Table creation	2	
	14 Fitting Linear regression in Excel	3	
	15 Linear regression using Excel formulas	3	
	16 Interpreting regression results	2	
IV	Data Visualisation Techniques	14	20
1 4	17 Creating Charts, Different types of charts	2	20
	18 Formatting Chart Objects, Changing the Chart Type, Showing and	2	
	Hiding the Legend, Showing and Hiding the Data Table		
	19 Creating charts from regression	2	
	20 Pivot Chart	2	
	21 Dashboards	2	
	22 Form Controls	4	
$\mathbf{V}$	Hands-on Spreadsheets	30	
	Spreadsheet Basics:		
	1. Create a new workbook in Excel.		
	2. Identify and label different parts of the Excel window, such as the		
	Ribbon, Formula Bar, Name Box, and Worksheet Tabs.		
	3. Insert and delete cells, columns, and rows within a worksheet.		
	Formatting:		
	4. Merge cells and wrap text within merged cells.		
	5. Experiment with different font styles, sizes, and colors for text formatting.		
	6. Apply various number formatting options (e.g., currency, percentage, date) to cells.		
	7. Add borders and shading to cells or ranges.		
	Range Operations:		
	8. Use Autofill to quickly populate a series of cells with data (e.g.,		
	numbers, dates, text).  9. Utilize Autosum to calculate the sum of a range of numbers automatically.		
	10. Practice relative, absolute, and mixed referencing in formulas to understand their impact on cell references.		
	11. Link data between different worksheets within the same workbook.		
	Formulas and Functions:		
	12. Experiment with different mathematical formulas (e.g., addition,		
	subtraction, multiplication, division) using the Formula Bar.  13. Apply common functions such as SUM, ROUND, CEIL, FLOOR, IF, AND, OR, AVERAGE, MIN, MAX, COUNT, COUNTIF,		
	SUMIF, VLOOKUP, and HLOOKUP to solve specific problems or analyze data sets.	r	
	14. Combine functions within formulas to perform more complex calculations.		
	Data Import and Export:		
	15. Import external data from sources such as CSV files, text files, or databases into Excel.		
	16. Export Excel data to different formats (e.g., CSV, PDF) for sharing or further analysis.		
	Filtering and Sorting: 17. Filter data to display specific records based on criteria (e.g., dates,		

categories, numerical ranges).	
18. Sort data alphabetically, numerically, or chronologically to analyze	
trends or identify patterns.	
Data Validation and Removal of Duplicates:	
19. Implement data validation rules to restrict input values within	
specified criteria (e.g., date ranges, numerical limits, list selections).	
20. Identify and remove duplicate records from a dataset while	
preserving unique data entries.	
Grouping, Ungrouping, and Subtotal:	
21. Group related rows or columns together to organize data	
hierarchically.	
22. Perform subtotal calculations within grouped data to summarize	
information at different levels of detail.	
Conditional Formatting:	
23. Apply conditional formatting using highlight cell rules to visually	
identify data outliers, trends, or exceptions.	
24. Utilize top/bottom rules to highlight top or bottom values within a	
dataset for quick analysis.	
Pivot Table Creation:	
25. Import a dataset into Excel and create a pivot table summarizing key	
metrics (e.g., sales revenue, product quantities) by different	
dimensions (e.g., region, product category).	
26. Experiment with different pivot table configurations (e.g., adding	
calculated fields, grouping data, creating hierarchical rows/columns)	
to gain insights into the dataset.	
Fitting Linear Regression in Excel:	
27. Import a dataset containing variables for linear regression analysis	
(e.g., independent and dependent variables).	
28. Use Excel's built-in regression analysis tool to fit a linear regression	
model to the data and calculate coefficients, standard errors, and	
goodness-of-fit measures.	
Creating Charts from Regression Analysis:	
29. Perform linear regression analysis on a dataset containing	
independent and dependent variables.	
30. Create a scatter plot chart to visualize the relationship between the	
variables, including the regression line and confidence intervals.	
Pivot Chart:	
31. Create a pivot chart based on a pivot table summarizing key metrics	
from a dataset.	
32. Customize the pivot chart to display data trends and patterns	
dynamically as the underlying pivot table data is updated.	
Dashboards:	
33. Design a dashboard incorporating multiple charts and pivot tables to	
provide a comprehensive overview of business metrics or	
performance indicators.	
34. Use interactive features such as slicers and timeline controls to	
enable users to filter and analyze data dynamically.	
Form Controls:	
35. Add form controls such as checkboxes, dropdown lists, and option	
buttons to interact with charts and pivot tables.	
outions to interact with charts and pivot tables.	

36. Create interactive features allowing users to customize chart views or update data dynamically based on user inputs.

	11	Polynomial regression	2	
III		Logistics Regression	11	14
	12	Basics of Logistic regression	2	
	13	Logistic regression with binary predictor	2	
	14	Odds ratio, z-statistic, p-values	3	
	15	Confidence intervals	2	
	16	Logistic regression with categorical predictors	2	
IV		Time Series analysis and forecasting	16	28
	17	Components of time-series, additive and multiplicative models	3	
	18	Methods for measurement of trends	2	
	19	Methods for measurement of seasonal fluctuations	3	
	20	Forecasting, Autocorrelation	2	
	21	ARIMA Model	3	
	22	ARMA Model	3	
V		Open Ended Module: Assignments, Case study	12	
		Provide real-world examples to understand the relationships between	4	
		ariables in data analysis using covariance, correlation		
		Jsing real examples, understand the difference between different types		
	1	of correlation.  Provide examples for nominal, ordinal, interval, and ratio data types		
		Provide examples of how linear regression is used in various fields		
		uch as economics, finance, healthcare, and engineering to analyze		
		elationships between variables and make predictions.	0	
		Analyze the relationship between different variables using multiple	8	
		inear regression. Eg: Health Care analytics: patients' demographics,		
		ifestyle factors, and medical history using multiple linear regression.		
		Analyze the relationship between different variables using logistic		
	r	egression. Eg: Predict the risk of developing a certain disease (e.g.,		

- diabetes, cancer) using logistic regression with binary predictors such as genetic markers, lifestyle factors, and medical history.
- 7. Analyze the time series model using ARIMA/ ARMA model

	18	Binomial distribution: Definition, Expectation, Variance, Moment Generating Function and Problems	2	20
IV	19	Poisson distribution: Definition, Expectation, Variance, Moment Generating Function and Problems	2	
	20	Normal distribution: Definition, Expectation, Variance, Moment Generating Function, Standard normal curve and Problems	3	

	21	Testing of Hypothesis: General principles of testing, Two types of errors	3	
	22	Type of Testing: T-Test, ANOVA-Test, Chi-square test (Concept Only)	2	
		Lab Activities (Use Sci Lab)	30	
		Implements mean, median and mode hight of then students		
		Determine the standard deviation and variance		
		Plot a histogram to visualize their distribution		
		Use SciLab to perform simple linear regression on a dataset with two variables.		
		Implement SciLab code to plot box plots, scatter plots, and density plots for the dataset to explore its characteristics.		
		Use SciLab to perform Least Square		
	1	Implement algorithms for multiple linear regression and logistic regression in SciLab to predict outcomes based on input features.	20	
		You have a deck of 52 playing cards. Calculate the probability of drawing a face card (jack, queen, or king) from the deck.		
v		Simulate random experiments and calculate probabilities of events using Scilab.		
		Write functions in SciLab to calculate probabilities for events based on given probability distributions (e.g., binomial, normal).		
	2	Case Study	2	
	Develop a predictive model using statistical techniques and tools for identifying a real-world problem in Artificial Intelligence.		8

V	22	Lab Activities  1. Identify the various software platforms for AI programming.  2. Identify the various platforms used for No-Code AI (Google Cloud Auto ML, Microsoft Azure Al Buildeer, IBM Watson Studio etc.)  3. Use chatbot platforms like ChatGPT or any other to engage in conversational interactions and		

interactive AI demos and simulations, such as neural network visualisers or AI-powered character generators.
6. Demonstrate the use of AI-based image editing tools (Actions: Remove objects from images, enhance details, or perform automated retouching.)
7. Utilize AI-powered text summarisation tools like SummarizeBot or Resoomer to generate summaries of lengthy articles or research papers.
8. Use any presentation software like Microsoft PowerPoint or Google Slides to demonstrate AIdriven design suggestions and layout recommendations.
9. Explore AI-based translation tools such as Google Translate or DeepL for translating text between different languages.
10. Assign students to analyse news articles, advertisements, or social media posts using AI technologies.
11. Introduce Students to data visualisation using Tableau Public, an accessible data visualisation tool.
12. Use Google's Teachable Machine platform to create a simple image classification model.
Case Study: Provide students with case studies or examples of AI applications in different domains (e.g.,
healthcare, finance, marketing).
Organize demos of AI technologies and applications,
such as virtual assistants, autonomous vehicles, facial
recognition systems, and recommendation engines.

Programme	B. Sc. Computer Science						
Course Title	Data Analysis and Visualisation Through Spread sheets						
Type of Course	MDC	MDC					
Semester	I						
Academic Level	100-199	100-199					
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours		
	3	3	-	-	45		
Pre-requisites		nderstanding o	•	operations			
Course	This course pr	rovides a con	nprehensive in	ntroduction to	Spreadsheets,		
Summary	analysis technic in spreadsheet	This course provides a comprehensive introduction to Spreadsheets, focusing on understanding formulas, functions, data organization, analysis techniques, and data visualization. Participants will gain skills in spreadsheet management, data cleansing, analysis, and visualization using Excel's various tools and features.					

## **Course Outcomes (CO):**

CO	CO Statement	Cognitive Level*	Knowledge Category#	Evaluation Tools used
CO1	Students will demonstrate proficiency in managing spreadsheets, including creating, formatting, and manipulating data within Excel workbooks. They will be able to effectively navigate Excel's interface and utilize toolbars.	U	P P	Instructor- created exams / Quiz
CO2	Learners will understand the importance of data organization and cleansing in Excel. They will be able to import, export, filter, sort, validate, and remove duplicates from datasets. Students will develop skills to ensure data integrity and consistency, enhancing their ability to work with clean and organized data sets.	U	P	Instructor- created exams/ Home Assignments
CO3	Participants will acquire advanced data analysis skills like pivot	Ap	Р	Instructor- created exams

	tables, what-if analysis, and goal seek. They will be able to apply various Excel functions and tools to perform complex calculations, analyze trends, and make informed decisions based on data analysis.			
CO <sup>4</sup>	Students will gain proficiency in data visualization techniques using Excel. They will be able to create a variety of charts, design pivot charts, dashboards for effective data analysis. Additionally, learners will be able to implement form controls for interactive data manipulation in their visualizations.	Ар	P	Instructor- created exams
COS	Learners will develop skills in advanced features of Excel like macros, protect data sheets and workbooks, utilize split, freeze, and hide options effectively, incorporate add-ins for extended functionalities, and manage printing options in Excel for professional presentation of data.	Ар	P	Instructor- created exams

<sup>\* -</sup> Remember (R), Understand (U), Apply (Ap), Analyse (An), Evaluate (E), Create (C)

Programme	B. Sc. Computer Science						
Course Title	Digital Empowerment through Ethical Standards						
Type of Course	MDC	MDC					
Semester	II						
Academic Level	100 – 199						
Course Details	Credit	Lecture per week	Tutorial per week	Practical per week	Total Hours		
	3	3	-	-	45		
Pre-requisites	Basic understar	nding of comp	uters				
Course Summary	This course explores the evolution from pre-digital challenges to the current digital landscape, covering historical milestones, key technologies, and the vision of Digital India. It emphasizes the benefits and importance of digital revolution while addressing ethical and security considerations. Participants engage with digital tools for personal and professional growth and examine case studies on digital infrastructure, missions, and services to understand real-world applications.						

## **Course Outcomes (CO):**

CO	CO Statement	Cognitive	Knowledge	Evaluation

# **Model Question Papers/ Major**

### FIRST SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

## CSC1CJ101 - Fundamentals of Computers and Computational Thinking

(2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### **Section A**

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Briefly describe the historical development of computers mentioning two key figures and their contributions.
- 2. Explain the concept of the Von Neumann architecture.
- 3. Convert the following numbers from decimal to binary: (a) 25, (b) 100.
- 4. Differentiate between active and passive electronic components. Provide an example of each.
- 5. What is the function of a motherboard? List four key components on a motherboard.
- 6. Distinguish between application software and system software. Give an example of each.
- 7. Briefly explain the role of an operating system in a computer system.
- 8. Define the term "computational thinking."
- 9. What are the steps involved in problem decomposition?
- 10. Explain the difference between inductive and deductive reasoning.

### **Section B**

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Describe the evolution of computers from first generation to present day, highlighting the key features of each generation.
- 12. Explain the concept of digital codes with reference to Gray code and BCD.
- 13. Briefly explain the working principle of a transistor.
- 14. Differentiate between RAM and ROM. Explain the different types of RAM.
- 15. Discuss the different types of operating systems and their characteristics.
- 16. Explain the concept of booting with reference to POST and UEFI/Legacy BIOS.
- 17. Describe the four key pillars of computational thinking.
- 18. Explain the importance of algorithms in solving problems. Discuss the qualities of a good algorithm.

## **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Discuss the contributions of John von Neumann to the field of computing.
  - b) Briefly explain the concept of Quantum Processing Units (QPU) and their potential applications.
- 20. a) Describe the various components of a computer system and their functionalities.
  - b) Explain the need for device drivers in a computer system.

## FIRST SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

#### CSC1FM105 - Data Analysis and Visualization using Spreadsheets

#### (2024 Admissions)

Time: 1.5 Hours Maximum: 50 Marks

#### Section A

[Answer All. Each question carries 2 marks] (Ceiling 16 Marks)

- 1. Define the terms "worksheet" and "workbook" in the context of Excel.
- 2. Explain three formatting options available for cells in Excel and briefly describe their applications.
- 3. How can you insert a new row and a new column within an Excel sheet?
- 4. Write a formula to calculate the average of a range of cells (A1:A10) in Excel.
- 5. Explain the purpose and benefits of data validation in Excel.
- 6. Differentiate between absolute and relative cell referencing with an example for each.
- 7. Describe the concept of Autofill and give an example of how it can be used in Excel.
- 8. Explain the steps involved in filtering data based on a specific criterion in Excel.
- 9. Describe the process of importing data from a text file into an Excel spreadsheet.
- 10. List two commonly used functions for applying conditional formatting in Excel.

### Section B

[Answer All. Each question carries 6 marks] (Ceiling 24 Marks)

- 11. A dataset contains duplicate entries. Describe the steps involved in removing these duplicate rows in Excel
- 12. You are given a dataset with sales figures for different regions. Explain how you would create a pivot table to analyse trends in sales across these regions.
- 13. Explain the concept of "What-If Analysis" in Excel and provide an example of how it can be used to support decision-making.
- 14. Write a formula using the VLOOKUP function to find the product price based on a product code in another table.
- 15. Describe three different chart types suitable for visualizing data in Excel and explain when you might use each type.

### **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 16. You are provided with a large dataset containing customer information and sales data.
  - a. Describe how you would utilize advanced features like data filtering, sorting, and pivot tables to identify the top 5 customers by sales in a specific region for the past year.
  - b. Create a visually appealing dashboard in Excel that summarizes key customer and sales data, including a chart to represent the top-selling products.

(or)

17. Explain the concept of macros in Excel and discuss their potential benefits and drawbacks. Briefly describe the steps involved in creating a simple macro to automate a repetitive task.

## SECOND SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

#### **Computer Science**

## CSC2FM106- Digital Empowerment Through Ethical Standards

#### (2024 Admissions)

Time: 1.5 Hours Maximum: 50 Marks

#### Section A

[Answer All. Each question carries 2 marks] (Ceiling 16 Marks)

- 1. Briefly discuss the challenges faced in the pre-digital age.
- 2. Explain the concept of digital transformation and its significance.
- 3. Briefly describe two key digital technologies and their potential benefits.
- 4. Explain the importance of Digital India initiatives in empowering citizens.
- 5. Describe the role of Akshaya Project in Kerala's digital emergence.
- 6. List four digital tools for data sharing and collaboration.
- 7. Briefly explain how online learning platforms like Coursera can enhance your professional growth.
- 8. What are the ethical considerations one should keep in mind while creating content online?
- 9. Define the term "Intellectual Property Rights" (IPR).
- 10. Briefly explain the concept of cybercrime.

#### **Section B**

[Answer All. Each question carries 6 marks] (Ceiling 24 Marks)

- 11. Compare and contrast the concepts of digitization and digitalization.
- 12. Explain the working principle of Cloud Computing with its advantages and limitations.
- 13. Describe the Internet of Things (IoT) and its potential applications in different sectors like healthcare or agriculture.
- 14. Discuss the four pillars of Digital Emergence in Kerala.
- 15. Explain the role of K-DISC (Kerala Development and Innovation Strategic Council) in digital empowerment.

## **Section C**

[Answer any one. Each question carries 10 marks]

 $(1 \times 1 = 10 \text{ Marks})$ 

16. a) Analyze the importance of digital literacy in the 21st century. Discuss how ethical considerations shape responsible digital citizenship.

- b) Using a real-world example, critically evaluate the impact of a digital mission or service on a specific community.
- 17. a) Explain the concept of Blockchain technology and its potential applications in various fields.
  - b) Discuss the legal framework for cyber security in India. Briefly explain some key cyber laws.

## SECOND SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

### **CSC2CJ101- Fundamentals Of Programming (C Language)**

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Explain the importance of algorithms in problem-solving. Provide an example to illustrate your answer.
- 2. Define pseudocode. How does it aid in algorithm development? Give an example of a simple algorithm represented using pseudocode.
- 3. Discuss the significance of flowchart symbols in algorithm representation. Draw a flowchart to represent the algorithm for finding the factorial of a number.
- 4. What is Raptor, and how does it relate to programming languages? Explain with an example.
- 5. Explain the structure of a C program. Give a brief description of each component.
- 6. Discuss the concept of operators in C programming. Provide examples of arithmetic, logical, and relational operators.
- 7. What are selection statements in C? Differentiate between 'if', 'if-else', and 'switch' statements with suitable examples.
- 8. Define arrays in C. Explain the difference between one-dimensional and two-dimensional arrays with examples.
- 9. Briefly explain the basic string handling functions in C.
- 10. Define structures in C. Discuss the concept of processing-period operator with an example.

#### **Section B**

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Write a C program to find the sum of all elements in an array.
- 12. Explain the difference between recursion and iteration. Provide examples to illustrate both concepts.
- 13. What are function prototypes in C? Why are they necessary? Provide an example.
- 14. Discuss the advantages of using functions in C programming.
- 15. How are pointers declared in C? Give examples to illustrate pointer declarations.
- 16. Write a C function to reverse a given string.
- 17. Discuss the concept of formal and actual parameters in C functions. Provide examples to explain each.
- 18. Explain the concept of unions in C. How are they different from structures? Provide an example.

### **Section C**

[Answer any one. Each question carries 10 marks]

 $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Develop an algorithm to find the largest element in an array. Implement the algorithm in C and explain each step of your solution.
- 20. Write a C program to implement a simple calculator that can perform addition, subtraction, multiplication, and division operations. Ensure proper error handling for division by zero.

## SECOND SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

#### **Computer Science**

### **CSC3CJ201-Software Project Management**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "Software Project Management" and explain its significance in software development.
- 2. Differentiate between the Waterfall model and the Incremental model of the Software Development Life Cycle (SDLC).
- 3. Briefly explain the concept of Agile Development and its core principles.
- 4. What is the purpose of the requirement engineering process?
- 5. Describe the key elements of data design in software development.
- 6. Explain the concept of UML and its role in software design.
- 7. Briefly discuss the importance of project planning in software project management.
- 8. Explain the Work Breakdown Structure (WBS) and its role in project management.
- 9. Define the term "Critical Path" in project scheduling.
- 10. Briefly explain the difference between proactive and reactive risk management strategies.

#### Section B

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Compare and contrast the Agile and Waterfall methodologies for software development. Discuss the advantages and disadvantages of each approach.
- 12. Describe the different phases involved in the design process for software development.
- 13. Explain the concept of architectural design using Data Flow Diagrams (DFDs).
- 14. Discuss the various techniques used for software estimation during project planning.
- 15. Explain the concept of network diagrams in project scheduling and their advantages over Gantt Charts.
- 16. Briefly describe the Program Evaluation and Review Technique (PERT) and its applications in project management.
- 17. Discuss different levels of software testing used to ensure software quality.
- 18. Explain the concept of white-box testing and black-box testing, providing examples for each.

#### Section C

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Discuss the different phases of the Agile development methodology. Explain how an iterative approach contributes to successful project delivery.
  - b) Consider a real-world software project (e.g., library management system, e-commerce platform) and identify potential risks associated with the project. Explain how you would develop a risk management plan (RMMM) to mitigate these risks.
- 20. a) Describe the various quality assurance processes and methodologies used in software development.
  - b) Create a Gantt chart for a simple software development project outlining key tasks, durations, and dependencies. Briefly explain your reasoning behind the scheduling decisions.

## SECOND SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

#### CSC3CJ202- Data Structures and Algorithm

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define data structure. Explain the difference between a data type and a data structure.
- 2. Discuss the applications of stacks in computer science, with relevant examples.
- 3. What are the different types of linked lists? Explain the concept of a circular linked list.
- 4. Explain the process of converting an infix expression to postfix using a stack with an example.
- 5. Define a queue. Discuss the applications of queues in real-world scenarios.
- 6. Compare and contrast a binary tree and a binary search tree.
- 7. How does a graph differ from a tree? Provide examples of both directed and undirected graphs.
- 8. Discuss the importance of hashing in data structures. Explain collision resolution techniques with examples.
- 9. Explain the difference between a data type and a data structure. Provide examples to illustrate each.
- 10. Describe the characteristics and real-world applications of a stack data structure

#### Section B

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Implement a stack using an array in C++. Include functions for push, pop, and display.
- 12. Write an algorithm to perform a depth-first traversal of a binary tree. Illustrate with an example.
- 13. Explain the concept of a doubly linked list. Discuss its advantages over a singly linked list.
- 14. Describe the process of performing a merge sort algorithm on an array. Provide a step-by-step explanation.
- 15. Discuss the working principle of the quick sort algorithm. Provide an example for better understanding.
- 16. Implement a queue using a linked list in Java. Include functions for enqueue, dequeue, and display.

- 17. Explain the process of binary search and its time complexity. Provide an example demonstrating its application.
- **18.** Discuss the concept of hash tables and their role in efficient data retrieval. Illustrate with a suitable example.

## **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Analyze the time complexity of the quicksort algorithm. Discuss its advantages and limitations compared to other sorting algorithms.
- 20. Investigate the collision resolution techniques used in hashing. Compare and contrast open hashing (chaining) and closed hashing (probing) methods

## SECOND SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

#### **Computer Science**

### CSC4CJ203- Database Management System

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "Database Management System" (DBMS) and explain its key characteristics.
- 2. Differentiate between a file system and a database management system.
- 3. Briefly describe the three-schema architecture in a DBMS.
- 4. Explain the concept of entity-relationship modeling (ER Model) in database design.
- 5. What are the different cardinalities in an entity-relationship diagram?
- 6. Define the term "normalization" in the context of relational databases.
- 7. Briefly explain the concept of Data Definition Language (DDL) in SQL.
- 8. What are the functionalities of Data Manipulation Language (DML) in SQL?
- 9. Explain the concept of transactions in a database system.
- **10.** Briefly describe the ACID properties of transactions.

#### Section B

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Discuss the advantages of using a DBMS approach for data management compared to a traditional file system approach.
- 12. Explain the concept of relational data model with examples of domains, attributes, tuples, and relations.
- 13. Describe the different normalization forms (1NF, 2NF, 3NF) used in relational database design.
- 14. Write an SQL query to create a table named "Students" with attributes "StudentID" (integer, primary key), "Name" (varchar), and "Program" (varchar).
- 15. Explain how to retrieve data from multiple tables using JOIN operations in SQL.
- 16. Briefly describe the concept of views in SQL and their benefits.
- 17. Discuss the concept of concurrency control in a database system and its importance.
- **18.** Explain the concept of NoSQL databases and differentiate them from relational databases. Briefly describe two main types of NoSQL databases (e.g., Key-value, Document).

#### **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Design an Entity-Relationship (ER) diagram for a library management system considering entities like Books, Authors, Members, and Loans. Include relevant attributes and relationships between entities.
  - b) Write SQL queries to perform the following operations in a library database:
  - i) Insert a new book record.
  - ii) Search for books by a specific author name.
  - iii) Update the availability status of a borrowed book upon return.
- 20. a) Discuss the ACID properties (Atomicity, Consistency, Isolation, Durability of transactions and their role in maintaining data integrity in a database system.
  - b) Briefly explain the concept of transaction logs and their significance in transaction recovery.
  - c) Describe two-phase locking as a concurrency control technique in databases.

## FOURTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

## CSC4CJ204- Fundamentals of Python Programming

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Explain the importance of indentation in Python programming. Provide an example to illustrate its significance.
- 2. Define the following terms: Identifiers, Keywords, and Variables in Python. Provide examples for each.
- 3. Describe the different types of function arguments in Python. Give examples to illustrate each type.
- 4. What is the scope and lifetime of variables in Python? Explain with suitable examples.
- 5. Discuss the decision-making structures available in Python with examples.
- 6. Explain the concept of looping structures in Python. Provide examples of for and while loops.
- 7. How are strings indexed and sliced in Python? Provide examples to demonstrate string indexing and slicing.
- 8. Describe the operations and methods available for manipulating lists in Python. Provide examples for each operation.
- 9. Explain the concept of operator precedence and associativity in Python. Provide examples to illustrate their significance.
- **10.** Discuss the importance of indentation in Python programming. How does it affect the execution of code? Provide an example..

#### Section B

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Define a function in Python and explain its components. Write a Python function to calculate the factorial of a given number.
- 12. Discuss the advantages of using modules in Python. Write a Python program to demonstrate the use of a user-defined module.
- 13. Explain the operations and methods available for dictionaries in Python. Provide examples for each operation.
- 14. Describe the creation and operations of sets in Python. Write a Python program to perform set operations such as union, intersection, and difference.
- 15. Explain the advantages of NumPy arrays over traditional Python lists. Create a NumPy array and perform arithmetic operations on it.

- 16. Discuss the basic plotting techniques available in Matplotlib. Provide examples of at least two types of plots.
- 17. Define Pandas Series and Pandas DataFrames. Write a Python program to create a Pandas Series from a dictionary.
- 18. Explain the concept of fancy indexing in NumPy. Provide an example demonstrating its usage.

### **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Discuss the importance of broadcasting in NumPy arrays. Provide examples to illustrate how broadcasting works.
- 20. Explain the process of creating histograms and pie charts using Matplotlib. Provide examples demonstrating the creation of both types of plots.

# SECOND SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

# **Computer Science**

# **CSC4CJ205-Computer Networks**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "computer network" and differentiate between the Internet and an Intranet.
- 2. Briefly describe three common network topologies.
- 3. Explain the concept of a layered network architecture model using an example.
- 4. Differentiate between analog and digital signals in data transmission.
- 5. Briefly explain the concept of multiplexing and its different types.
- 6. What are the different types of errors that can occur during data transmission?
- 7. Briefly describe the concept of Cyclic Redundancy Check (CRC) for error detection.
- 8. Define the term "MAC address" and its significance in data link layer communication.
- 9. Differentiate between CSMA/CD and CSMA/CA protocols used in multiple access networks.
- 10. Briefly explain the function of a router and its role in internetworking.

### **Section B**

- 11. Discuss the different layers of the OSI reference model and their functionalities.
- 12. Explain the concept of data encapsulation in layered network communication protocols.
- 13. Briefly describe the characteristics of twisted-pair cable and coaxial cable as transmission media.
- 14. Explain the concept of error correction techniques and differentiate them from error detection techniques.
- 15. Briefly describe the stop-and-wait and go-back-n error recovery protocols used in data link layer communication.
- 16. Explain the functionalities of network devices like repeaters, bridges, and gateways.
- 17. Discuss the difference between IPv4 and IPv6 addressing schemes.
- 18. Briefly explain the concept of subnet masks and their role in network addressing.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Explain the functionalities of TCP and UDP protocols in the transport layer with their key differences.
  - b) Discuss various congestion control mechanisms used in TCP to avoid network congestion.
- 20. a) Describe the concept of the Domain Name System (DNS) and its role in internetworking.
  - b) Briefly explain the functionalities of common application layer protocols like HTTP, FTP, and SMTP.

# FIFTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# CSC5CJ301-Data Mining

### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- Define the term "data mining" and differentiate it from the Knowledge Discovery in Databases (KDD) process.
- 2. Briefly describe different types of data sources used in data mining tasks.
- 3. What kinds of patterns can be mined from data using data mining techniques?
- 4. Explain the role of statistics and machine learning in data mining.
- 5. What is the significance of data cleaning in data preprocessing?
- 6. Describe how missing values are handled during data cleaning.
- 7. Briefly explain the concept of data warehousing and its relation to data mining.
- 8. What is the purpose of data reduction techniques in data mining?
- 9. Define the term "association rule mining" and provide an example.
- 10. Briefly explain the concept of decision tree learning in classification tasks.

# **Section B**

- 11. Discuss the various phases involved in the KDD process, highlighting the importance of each phase.
- 12. Explain the concept of data integration and address potential challenges associated with it.
- 13. Briefly describe the Principal Component Analysis (PCA) technique for data dimensionality reduction.
- 14. Explain the Apriori algorithm used for frequent itemset mining in association rule learning.
- 15. Discuss the concept of attribute selection measures used in decision tree learning algorithms.
- 16. Explain the working principle of K-Means clustering algorithm with its advantages and limitations.
- 17. Differentiate between hierarchical clustering and density-based clustering techniques. Briefly explain one example of each.
- **18.** Explain the concept of outlier detection and its importance in data analysis.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Consider a real-world scenario like customer purchase data from an online retail store. Explain how data mining techniques can be applied to extract valuable insights for improved marketing strategies.
  - b) Describe the process of data mining using a sample dataset (e.g., movie ratings, weather data). Explain the steps involved in data pre-processing, choosing a suitable data mining algorithm, and interpreting the results.
- 20. a) Discuss the ethical considerations and challenges associated with data mining in the context of privacy and security.
  - b) Briefly explain the concept of recommender systems and their applications.
  - c) Describe the role of data mining in different domains like healthcare, finance, or social media.

# FIFTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# **CSC5CJ302-Object Oriented Programming (Java)**

### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the key concepts of object-oriented programming (OOP) and explain its advantages over procedural programming.
- 2. Differentiate between primitive data types and reference data types in Java.
- 3. Briefly explain the concept of operators in Java and provide examples of different types of operators.
- 4. What is the purpose of access modifiers in Java?
- 5. Differentiate between constructor overloading and method overloading in Java.
- 6. Briefly explain the concept of inheritance in Java and its types.
- 7. What are exceptions in Java?
- 8. Briefly describe the use of try...catch...finally blocks for exception handling.
- 9. Explain the concept of threads in Java and their different states.
- 10. Briefly describe the Model-View-Controller (MVC) pattern used in GUI applications.

## **Section B**

- 11. Write a Java program to demonstrate the use of a scanner class to read user input for two numbers and then display their sum and difference.
- 12. Explain the concept of multidimensional arrays in Java with an example of declaring and initializing a 2D array.
- 13. Describe the concept of method overriding in Java and provide an example of a base class and a derived class with overridden methods.
- 14. Write a Java program to demonstrate the concept of interface implementation where an interface defines abstract methods and a class implements them.
- 15. Briefly explain the working principle of try-with-resources statement for handling resources in Java.
- 16. Write a Java program to read data from a text file line by line and display the contents on the console.
- 17. Explain the concept of database connectivity using JDBC in Java and the steps involved in establishing a connection to a database.

18. Write a Java program using JDBC to create a table in a database and insert a new record into the table.

# **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Design a Java class named Student with attributes like name, roll number, and marks. Include methods to get and set these attributes.
  - b) Write a separate Java class named StudentDemo with a main method to create an object of the Student class, set its attributes, and then display the student information using getter methods.
- 20. a) Develop a simple Java GUI application using Swing that displays a text field and a button. When the button is clicked, the text entered in the text field should be displayed in a label.
  - b) Briefly explain the concept of layout managers in Swing and describe two common layout managers used for arranging GUI components.

# FIFTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

# **Computer Science**

## CSC5CJ303- Full Stack Web Development

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "full stack web development" and explain the different technologies involved in this field.
- 2. Differentiate between semantic tags and non-semantic tags in HTML. Provide examples of each.
- 3. Briefly explain the concept of CSS selectors used to style HTML elements.
- 4. What is the purpose of the CSS Box Model?
- 5. Explain the difference between var, let, and const keywords used for declaring variables in JavaScript.
- 6. Briefly describe the concept of data types in JavaScript and provide examples of primitive data types.
- 7. What are the advantages of using functions in JavaScript code?
- 8. Define the term "Node.js" and explain its role in server-side development.
- 9. Briefly describe the concept of event handling in Node.js.
- 10. Explain the difference between SQL and NoSQL databases.

### **Section B**

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Write HTML code to create a responsive web page with a header, navigation bar, main content section, and a footer. Use appropriate semantic tags and CSS styling.
- 12. Explain the concept of DOM (Document Object Model) and how JavaScript interacts with the DOM to manipulate web page elements.
- 13. Write a JavaScript function to check if a given number is even or odd.
- 14. Briefly describe the concept of asynchronous programming in Node.js and its benefits.
- 15. Explain the concept of Express.js framework and its role in building web applications using Node.js.
- 16. Briefly describe the concept of components and their lifecycle methods in React.js.
- 17. Explain the difference between state and props in React components.
- **18.** Briefly describe the functionalities offered by MongoDB as a NoSQL database.

# **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Develop a simple single-page application (SPA) using React.js that displays a list of products with their names and prices. Allow users to add items to a shopping cart and display the total cart value.
  - b) Briefly explain the concept of routing in React applications and its importance.
- 20. a) Design and develop a web application using Node.js and Express.js that allows users to create and manage a list of tasks. Users should be able to add new tasks, mark tasks as complete, and view a list of pending and completed tasks. Explain the functionalities used in your code. b) Briefly describe the concept of RESTful APIs and their advantages in web development.

# FIFTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

# **CSC6CJ304- Digital Electronics and Computer Architecture**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Convert the decimal number 23 to binary and explain the steps involved.
- 2. Briefly describe the concept of 2's complement representation in binary numbers.
- 3. Explain the truth table and logic symbol of a NAND gate.
- 4. Derive the simplified Boolean expression for a XOR gate using basic gates.
- 5. Briefly explain the concept of K-maps and their use in simplifying logic expressions.
- 6. What is a combinational logic circuit? Provide an example.
- 7. Briefly describe the operation of a D flip-flop with a truth table.
- 8. Differentiate between synchronous and asynchronous counters.
- 9. Define the term "computer architecture" and its basic components.
- 10. Explain the difference between RISC and CISC processor architectures.

### **Section B**

- 11. Perform the following binary arithmetic operations: a) Add 1101 (binary) and 1010 (binary) using the 2's complement method. b) Subtract 1011 (binary) from 1100 (binary) using the 2's complement method.
- 12. Design a logic circuit using basic gates (AND, OR, NOT) to implement the following Boolean expression: Y = A'B + AB'C
- 13. Simplify the following Boolean expression using a K-map:  $F(A, B, C, D) = \Sigma m(0, 1, 2, 4, 5, 7, 8, 10, 12, 13, 14, 15)$
- 14. Explain the working principle of a full adder circuit with a truth table.
- 15. Briefly describe the operation of a 4x1 multiplexer with a diagram.
- 16. Explain the concept of a synchronous counter and design a mod-4 counter using D flip-flops.
- 17. Briefly describe the role of the control unit in a computer and its functionalities.
- **18.** Explain the concept of pipelining in a processor and its benefits.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Design a combinational logic circuit using basic gates to convert a 4-bit binary number to its corresponding gray code equivalent. Explain the logic behind your design.
  - b) Briefly describe the concept of memory hierarchy in a computer system and its importance.
- 20. a) Explain the concept of a microprogrammed control unit in a processor and its advantages over a hardwired control unit.
  - b) Briefly describe different types of memory organization within the memory hierarchy.
  - c) Explain the concept of Direct Memory Access (DMA) for data transfer between a processor and I/O devices.

# SIXTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

### **Computer Science**

# **CSC6CJ305- Principles of Operating Systems**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Briefly describe the history and evolution of operating systems.
- 2. Explain the main objectives and functions of an operating system.
- 3. Define the term "process" in operating systems and explain different process states.
- 4. Briefly describe the concept of a Process Control Block (PCB) and its contents.
- 5. Differentiate between preemptive and non-preemptive scheduling algorithms in process management.
- 6. Briefly explain the concept of inter-process communication (IPC) mechanisms.
- 7. What is a critical section in process synchronization?
- 8. Explain the concept of semaphores used for process synchronization.
- 9. Define deadlock in an operating system and explain the necessary conditions for deadlock to occur.
- 10. Briefly describe methods for handling deadlocks (prevention, avoidance, detection & recovery).

## **Section B**

- 11. Compare and contrast short-term and long-term scheduling algorithms used in process management.
- 12. Explain the concept of the First Come First Served (FCFS) scheduling algorithm with an example.
- 13. Briefly describe the working principle of the Shortest Job First (SJF) scheduling algorithm. Why is SJF not always practical?
- 14. Explain the concept of semaphores with a code example demonstrating their use for process synchronization.
- 15. Consider the classical Reader-Writer problem in process synchronization. Describe a solution using semaphores.
- 16. Differentiate between contiguous and non-contiguous memory allocation techniques.
- 17. Explain the concept of paging as a memory management technique with a diagram.
- **18.** Briefly describe the concept of virtual memory and its benefits over physical memory.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Write a shell script in Linux that takes two numbers as command-line arguments and then calculates their sum, difference, product, and quotient.
  - b) Briefly explain the concept of shell scripting and its advantages.
- 20. a) Explain the concept of segmentation as a memory management technique with a diagram. Discuss the advantages and disadvantages of segmentation compared to paging.
  - b) Describe various I/O redirection operators used in Linux shell scripting (>, <, >>, <<). Provide examples of their usage.
  - c) Explain the working principle of the ping command in Linux and its purpose.

# SIXTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

## CSC6CJ306 - Introduction to Artificial Intelligence & Machine Learning

### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Differentiate between Artificial Intelligence (AI) and Machine Learning (ML) approaches to problem solving.
- 2. Briefly describe various applications of Artificial Intelligence in real-world scenarios.
- 3. Explain the concept of uninformed search algorithms in AI problem solving. Provide an example.
- 4. Briefly describe the A\* search algorithm and its advantages over uninformed search algorithms.
- 5. What is knowledge representation in AI? Explain two common knowledge representation methods.
- 6. Briefly differentiate between forward and backward reasoning in AI.
- 7. Define an artificial neural network (ANN) and its basic structure.
- 8. Explain the concept of supervised learning in machine learning.
- 9. Briefly describe the K-means clustering algorithm for unsupervised machine learning.
- 10. What is the importance of feature engineering in machine learning projects?

# **Section B**

- 11. Compare and contrast depth-first search and breadth-first search algorithms used in AI problem solving. Analyze their time and space complexities.
- 12. Explain the concept of heuristic functions used in informed search algorithms. Provide an example of a heuristic function for a specific problem.
- 13. Briefly describe the process of knowledge representation using propositional logic with an example.
- 14. Explain the working principle of a single-layer perceptron model in artificial neural networks.
- 15. Briefly describe the concept of backpropagation used for training multi-layer perceptrons.
- 16. Differentiate between classification and regression algorithms in supervised machine learning. Provide an example of each.
- 17. Explain the concept of dimensionality reduction in machine learning and its benefits. Briefly describe Principal Component Analysis (PCA).
- 18. Describe the steps involved in building and evaluating a classification model using machine learning.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Implement a depth-first search algorithm in Python to find a path from a start node to a goal node in a maze represented as a 2D array.
  - b) Briefly explain the concept of search space complexity in AI problem solving.
- 20. a) Explain the concept of a decision tree algorithm used for classification in supervised machine learning. How does a decision tree make predictions on new data?
  - b) Write a Python code snippet to perform K-means clustering on a sample dataset.
  - c) Briefly describe the concept of overfitting in machine learning and methods to prevent it.

# SIXTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

# **Computer Science**

# CSC8EJ402-System Software

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "System Programming" and explain its goals.
- 2. Explain the difference between compilers, assemblers, linkers, and loaders.
- 3. Describe the stages involved in the compilation process and the purpose of each stage.
- 4. What are system calls? Provide examples of different types of system calls.
- 5. Discuss the principles of lexical analysis in the context of compiler design.
- 6. Explain the role of macros and macro processors in system programming.
- 7. Define the concepts of relocation and linking. How are they related to each other?
- 8. Differentiate between absolute loaders and relocating loaders.
- 9. What are the key data structures used in compilers? Explain their significance.
- 10. Describe the phases involved in a compiler with a focus on code optimization

### Section B

- 11. Discuss the design and functionality of a two-pass assembler.
- 12. Explain the process of debugging in system programming. Highlight the use of debugging tools and techniques.
- 13. Analyze the impact of optimization techniques in the compilation process. Provide examples to support your analysis.
- 14. Evaluate the advantages and disadvantages of various linking and loading schemes.
- 15. Describe the principles of compiler design and their application in writing a simple compiler.
- 16. How do system calls facilitate various system-level tasks? Provide examples of system calls used in process management.
- 17. Discuss the standard C library functions commonly used for system calls. Provide examples to illustrate their usage.
- **18.** Explain the concept of intermediate code generation in compiler design. How does it contribute to the overall compilation process?

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Design a simple macro and demonstrate its usage in a sample assembly code.
- 20. Develop a high-level algorithm for a basic compiler, outlining the key phases and their interactions. Provide a brief explanation of each phase

# SEVENTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# **CSC7CJ401- Theory of Computation**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "formal language" in the context of Theory of Computation.
- 2. Briefly describe the Chomsky hierarchy for classifying formal languages.
- 3. Differentiate between Deterministic Finite Automata (DFA) and Non-deterministic Finite Automata (NFA).
- 4. Explain the concept of ε-moves in Non-deterministic Finite Automata.
- 5. Briefly describe the pumping lemma for regular languages and its application.
- 6. What is a Pushdown Automata (PDA)? Explain its basic components.
- 7. Differentiate between Deterministic Pushdown Automata (DPDA) and Non-deterministic Pushdown Automata (NPDA).
- 8. Briefly explain the concept of Context-Free Grammars (CFGs) used to define context-free languages.
- 9. What is the Church-Turing Thesis?
- 10. Define the terms "decidability" and "undecidability" in the context of computational problems.

## Section B

- 11. Construct a Deterministic Finite Automata (DFA) that recognizes binary strings ending with a 10.
- 12. Briefly explain the steps involved in converting a Regular Expression (RE) to a Non-deterministic Finite Automata (NFA).
- 13. Prove the closure of regular languages under union using a formal proof with set theory notation.
- 14. Explain the concept of an instantaneous description of a Pushdown Automata (PDA) during configuration transition.
- 15. Briefly describe the pumping lemma for context-free languages and its application.
- 16. Convert the following Context-Free Grammar (CFG) to Chomsky Normal Form (CNF):  $S \rightarrow AB \mid a \mid A \rightarrow bS \mid b \mid B \rightarrow \epsilon$
- 17. Briefly explain the CYK algorithm used to check membership of a string in a context-free language.

**18.** Explain the concept of the Halting Problem and its significance in understanding the limitations of computation.

# **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Design a Turing Machine that recognizes strings over the alphabet {0, 1} containing an even number of 0s.
  - b) Briefly explain the concept of the Universal Turing Machine and its significance in the Theory of Computation.
- 20. a) Explain Rice's Theorem and its implications for the undecidability of properties of programs.
  - b) Briefly describe the classes P and NP in computational complexity theory. Explain the P vs. NP problem.

# SEVENTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# CSC7CJ402- System Security

### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the CIA triad (Confidentiality, Integrity, Availability) in system security. Briefly explain the importance of each element.
- 2. Differentiate between threats and vulnerabilities in system security.
- 3. Briefly describe common types of system attacks and their impact.
- 4. Explain the role of attackers in system security and different types of attackers based on their motivations.
- 5. What is the importance of operating system security?
- 6. Briefly describe file protection mechanisms used in operating systems.
- 7. Define the term "database security" and its key objectives.
- 8. Explain the concept of risk analysis in system security planning.
- 9. Briefly describe different types of security policies that can be implemented in an organization.
- 10. What is the purpose of security controls in information security?

## **Section B**

- 11. Explain how buffer overflow vulnerabilities can be exploited by attackers to gain unauthorized access to a system.
- 12. Briefly describe different types of malicious code (viruses, worms, etc.) and how they spread within a system.
- 13. Explain control mechanisms used to prevent or mitigate program-based threats like buffer overflows.
- 14. Describe different memory protection techniques used in operating systems to safeguard data integrity.
- 15. Briefly explain the concept of access control lists (ACLs) used for file system security.
- 16. Explain the concept of authentication and different authentication mechanisms used in computer systems.
- 17. Briefly describe the concept of multilevel security in database management systems.
- 18. Explain the importance of data integrity and reliability in database security.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Discuss the challenges faced in implementing strong password policies in an organization.
  - b) Briefly describe different biometric authentication methods used for user identification.
- 20. a) Explain the concept of a Trusted Operating System (TOS) and its role in enhancing system security.
  - b) Describe different types of security controls (preventive, detective, corrective) and their functionalities.

# SEVENTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

## CSC7CJ403- Advanced Data Structures and algorithms

### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "data structure" and explain its characteristics.
- 2. Briefly describe the concept of Abstract Data Types (ADTs) in computer science.
- 3. Explain the terms "time complexity" and "space complexity" used for analyzing algorithms.
- 4. Differentiate between Big O notation and Big Theta notation used for asymptotic analysis of algorithms.
- 5. Briefly describe the Brute-Force search algorithm and provide an example of its application.
- 6. Explain the concept of the Divide-and-Conquer strategy used for algorithm design.
- 7. What is a Greedy Algorithm? Briefly describe a real-world application of a greedy algorithm.
- 8. Define a Binary Search Tree (BST) and its basic operations.
- 9. Briefly explain the concept of a graph data structure and its basic operations.
- 10. What is a Heap data structure? Differentiate between Min-Heaps and Max-Heaps.

### **Section B**

- 11. Briefly describe the steps involved in the Merge Sort algorithm and analyze its time and space complexity.
- 12. Explain the concept of the Knapsack problem and how it can be solved using a Branch-and-Bound technique.
- 13. Describe Kruskal's algorithm for finding the minimum spanning tree of a graph.
- 14. Explain the concept of Dynamic Programming and its application to solve the Longest Common Subsequence (LCS) problem.
- 15. Briefly describe the concept of backtracking algorithms and provide an example of a problem that can be solved using backtracking.
- 16. Perform an in-order traversal on the following Binary Search Tree and write down the elements visited:

  A -> B -> C -> D -> E
- 17. Explain the concept of Breadth-First Search (BFS) traversal used for graphs and its applications.

**18.** Briefly describe the concept of Heapsort, a sorting algorithm based on heap data structures. Analyze its time complexity.

# **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Implement a function in Python to perform a linear search on a singly linked list to find a specific element.
  - b) Briefly explain the advantages and disadvantages of using linked lists compared to arrays as data structures.
- 20. a) Explain the concept of AVL trees and how they maintain balance in a binary search tree.
  - b) Describe different graph traversal techniques (Depth-First Search (DFS)) and their applications.

# SEVENTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# CSC7CJ404-Blockchain Technology

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Briefly explain the concept of cryptography and its role in blockchain technology.
- 2. Differentiate between symmetric and asymmetric cryptography used in blockchain. Provide examples of each.
- 3. What is a digital signature? Explain its importance in securing transactions on a blockchain network.
- 4. Define the term "blockchain" and its basic architecture.
- 5. Briefly describe the benefits and limitations of blockchain technology.
- 6. Differentiate between public, private, and consortium blockchains.
- 7. Explain the concept of consensus mechanisms in blockchain networks.
- 8. Briefly describe the Proof-of-Work (PoW) consensus algorithm used in Bitcoin.
- 9. What are smart contracts on a blockchain? Provide an example of a use case for smart contracts.
- 10. Briefly explain the concept of Decentralized Autonomous Organizations (DAOs).

## Section B

- 11. Explain the working principle of Elliptic Curve Cryptography (ECC) used in blockchain for key generation and digital signatures.
- 12. Describe the concept of a Merkle tree and its applications in ensuring data integrity within a blockchain.
- 13. Briefly explain the concept of decentralization and how blockchain technology promotes decentralized networks.
- 14. Differentiate between Byzantine Fault Tolerance (BFT) and Crash Fault Tolerance (CFT) consensus algorithms used in blockchain.
- 15. Explain the concept of Proof-of-Stake (PoS) as a consensus mechanism and its advantages over Proof-of-Work (PoW).
- 16. Describe the basic structure of a Bitcoin transaction and its lifecycle within the blockchain network.
- 17. Explain the concept of cryptocurrency mining and the role of miners in securing the blockchain network.
- 18. Briefly describe different types of blockchain oracles and their functionalities within smart contracts.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. a) Explain the potential applications of blockchain technology in the healthcare industry.
  - b) Briefly discuss the challenges associated with implementing blockchain technology in real-world applications.
- 20. a) Write a simple Python program to demonstrate the generation of a SHA-256 hash for a given string.
  - b) Explain how blockchain technology can be used to enhance supply chain management processes.

# SEVENTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

# **Computer Science**

# **CSC7CJ405-Internet of Things**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the Internet of Things (IoT) and explain its key components.
- 2. Differentiate between M2M communication and IoT communication.
- 3. Briefly explain the concept of IoT architecture with a basic diagram.
- 4. List the key design principles for connected devices in an IoT system.
- 5. What is the role of a gateway in an IoT system?
- 6. Explain the importance of data enrichment in IoT applications.
- 7. Briefly describe commonly used communication protocols in IoT networks.
- 8. Explain the difference between HTTP and HTTPS protocols in the context of IoT.
- 9. Give examples of popular hardware platforms used for IoT development.
- **10.** Briefly describe the process of implementing an IoT system for real-time data collection and visualization.

## **Section B**

- 11. Explain the various sources of data in an IoT system.
- 12. Discuss the role of sensors and actuators in IoT applications.
- 13. Explain the concept of Media Access Control (MAC) in IoT communication.
- 14. Briefly describe the working principles of REST and SOAP protocols.
- 15. Explain the importance of IPv6 addressing in modern IoT networks.
- 16. Discuss the benefits and limitations of using wireless sensor networks (WSN) in IoT.
- 17. Briefly explain the functionalities of popular cloud platforms for IoT development.
- **18.** Discuss the security vulnerabilities and threats associated with IoT systems.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Choose a real-world application of IoT (e.g., smart home, wearables, industrial automation) and explain the system architecture, data flow, and potential benefits of the application.
- 20. Describe the design process for an IoT system. Your explanation should include:
  - \* Identifying the problem or need the system will address.
  - \* Selecting the hardware and software components.
  - \* Designing the communication protocols and data flow.
  - \* Implementing and testing the system.

# SEVENTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# CSC8CJ406- Compiler Design

### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Briefly explain the different phases involved in the compilation process.
- 2. Define the term "lexical analysis" and explain its role in a compiler.
- 3. Differentiate between tokens, patterns, and lexemes.
- 4. Explain the concept of left recursion in context-free grammars (CFGs) and methods for its elimination.
- 5. What is a parse tree? Explain its significance in compiler design.
- 6. Briefly describe the top-down and bottom-up parsing approaches.
- 7. Differentiate between LL(1) and SLR(1) parsing techniques.
- 8. Explain the concept of syntax-directed translation (SDT) in the context of compilers.
- 9. Discuss the various storage allocation strategies used in compilers.
- 10. Briefly describe the three-address code intermediate representation.

### **Section B**

- 11. Explain the concept of bootstrapping in compiler writing.
- 12. Describe the process of input buffering in lexical analysis.
- 13. Construct a Non-Deterministic Finite Automata (NFA) to recognize identifiers in a programming language. (You can mention the concept briefly without going into detailed construction.
- 14. Given the following grammar, derive the string "a+b" using leftmost derivation: E -> TE' | T E' -> +T |  $\epsilon$  T -> F F -> (E) | id
- 15. Construct a parse tree for the expression "a \*b + c" using the appropriate parsing technique.
- 16. Explain the steps involved in the bottom-up parsing approach with an example.
- 17. Discuss the advantages and limitations of S-attributed and L-attributed definitions in SDT.
- 18. Explain the concept of local and global optimization in code generation.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Design a lexical analyzer for a simple calculator program that recognizes tokens like numbers, operators (+, -, \*, /), and parentheses. Use a regular expression or Finite Automata (FA) to define the token patterns.
- 20. Consider the following grammar for a simple assignment statement language:

$$S \rightarrow id = E;$$

$$E -> T | E + T | E - T$$

F -> (E) | num

- a) Construct an SLR(1) parsing table for the above grammar.
- b) Use the parsing table to parse the statement "a = b \* c + d".

# EIGHTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

# **Computer Science**

### CSC8CJ407- Client-Server Architecture

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the term "client-server architecture" and explain its key components.
- 2. Briefly explain the factors that led to the development of client-server systems.
- 3. Describe the concept of a "single system image" in client-server computing.
- 4. Differentiate between two-tier and three-tier client-server architecture.
- 5. What is the role of middleware in client-server systems?
- 6. Explain the Model-View-Controller (MVC) design pattern used in client-server applications.
- 7. Briefly describe the types of client/server network services.
- 8. List some common management services offered in client-server systems.
- 9. Discuss the potential network issues in client-server communication.
- 10. Explain how remote desktop protocols (RDP) are used for client-server support.

### **Section B**

- 11. Explain the advantages and disadvantages of client-server computing compared to traditional centralized systems.
- 12. Describe the development process for a typical client-server application.
- 13. Discuss security considerations in client-server systems.
- 14. Briefly explain the concept of Remote Procedure Call (RPC) and its benefits.
- 15. Describe the functionalities of Windows services in a client-server environment.
- 16. Explain the working principles of Dynamic Data Exchange (DDE) between client and server applications.
- 17. Briefly discuss Object Linking and Embedding (OLE) technology in client-server communication.
- 18. Explain the concept of server administration and its key responsibilities.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Choose a real-world application (e.g., email system, online banking) and explain how it utilizes a client-server architecture. Discuss the roles of the client and server components, data flow, and benefits of this architecture for the chosen application
- 20. A company is planning to develop a new e-commerce platform.
  - a) Discuss the factors to consider when choosing between a two-tier and three-tier client-server architecture for this application.
  - b) Describe the potential network management challenges associated with the chosen architecture and propose solutions to address them.

# EIGHTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

# **Computer Science**

# CSC8CJ489- Research Methodology

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define research methodology and explain its importance in conducting research.
- 2. Differentiate between basic research and applied research. Provide an example of each.
- 3. Explain the concept of research problem and its significance in the research process.
- 4. Briefly describe the different research approaches used in various disciplines.
- 5. What are the key features of a good research design?
- 6. Differentiate between primary and secondary data sources used in research.
- 7. Explain the concept of data validation and its importance in research.
- 8. Describe the different types of sampling techniques used in data collection.
- 9. Explain the concept of reliability in research and methods to ensure it.
- 10. Briefly describe the different measures of central tendency used in data analysis.

### **Section B**

- 11. Discuss the various factors influencing the selection of a research topic.
- 12. Explain the steps involved in formulating a clear and concise research question.
- 13. Briefly describe the types of research designs suitable for quantitative and qualitative research approaches.
- 14. Discuss the advantages and disadvantages of using questionnaires as a data collection method.
- 15. Explain the concept of validity in research and different types of validity tests.
- 16. Briefly describe the process of data processing and analysis in research.
- 17. Explain how measures of dispersion help in understanding data variability.
- 18. Discuss the importance of research report writing and its key components.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Choose a field of study that interests you (e.g., computer science, psychology, education) and propose a research topic within that field.
  - i. Define the research problem and research question.
  - ii. Justify the need for the research.
  - iii. Explain the research design you would adopt (e.g., survey, experiment, case study).
  - iv. Describe the methods you would use for data collection and analysis.
- 20. Imagine you are a researcher studying the effectiveness of online learning platforms. Explain how you would interpret the results of your research and present your findings in a clear and concise research report. Include the steps involved in data interpretation, key findings, limitations of the study, and recommendations for future research.

# EIGHTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# **CSC8CJ408- Parallel Computing**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define parallel computing and explain its key advantages over traditional sequential computing.
- 2. Briefly describe the different parallel computational models (e.g., Flynn's Taxonomy).
- 4. Explain the concept of task decomposition and its importance in parallel algorithms.
- 5. What are the challenges associated with communication overhead in parallel computing?
- 6. Differentiate between one-to-all broadcast and all-to-one reduction communication models.
- 7. Explain the concept of message passing paradigm in parallel programming.
- 8. Briefly describe the functionality of the Message Passing Interface (MPI) standard.
- 9. What are the benefits of using threads in parallel programming?
- 10. Explain the role of synchronization primitives in thread management.

### **Section B**

- 11. Discuss the factors to consider when designing parallel algorithms for problem solving.
- 12. Explain the concept of load balancing in parallel computing and techniques to achieve it.
- 13. Briefly describe the scatter and gather communication operations in parallel algorithms.
- 14. Explain the concept of overlapping communication with computation in message-passing programming.
- 15. Discuss the functionalities of groups and communicators in MPI.
- 16. Explain the basic operations involved in thread creation and management using a POSIX API.
- 17. Briefly describe different synchronization constructs used in thread programming (e.g., mutex, semaphores).
- 18. Explain how OpenMP directives can be used to parallelize a matrix multiplication algorithm.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Choose a real-world problem that can be solved using parallel computing (e.g., image processing, weather simulation).
  - Explain how you would decompose the problem into smaller tasks suitable for parallel processing.
  - Describe the communication model you would use (message passing or shared memory).
  - Justify your choice of communication model and discuss the potential challenges associated with it.
- 20. Consider a parallel algorithm for sorting a large list of numbers using a divide-and-conquer approach.
  - Explain the steps involved in the algorithm for parallel execution using message passing paradigm.
  - Illustrate the algorithm with an example (e.g., sorting a list of 8 numbers using 2 processors).

# EIGHTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

# **CSC8EJ404- Advanced Distributed Computing**

# (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define distributed computation model and highlight its key aspects.
- Discuss the goals of distributed systems and differentiate between synchronous and asynchronous execution.
- 3. Explain the relationship between distributed systems and parallel systems.
- 4. Describe the different types of distributed system models.
- 5. What are the hardware and software concepts related to distributed systems? Provide examples.
- 6. Briefly explain the role of middleware models in distributed systems.
- 7. Define communication and coordination in the context of distributed computing. Discuss the models of process communication.
- 8. Explain the concepts of consistency and atomicity in distributed systems.
- 9. Discuss the significance of scalability and cache coherence in multiprocessor systems.
- 10. What are the synchronization mechanisms used in distributed systems? Provide examples.

## **Section B**

- 11. Illustrate the design principles of distributed computing and communication.
- 12. Compare and contrast the models of communication networks in distributed systems.
- 13. Explain the concepts of shared memory and message-passing in distributed systems. How do they contribute to coordination?
- 14. Discuss the role of consensus in distributed systems. How is it achieved?
- 15. Describe the Bully algorithm and the Ring algorithm for leader election in distributed systems.
- 16. Explain the Chandy-Lamport snapshot algorithm for FIFO channels. How does it ensure consistent global states?
- 17. Discuss termination detection in distributed systems using distributed snapshots. How is it different from termination detection by weight throwing?
- 18. Analyze the scalability challenges in distributed systems and propose strategies to address them.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Choose a mutual exclusion algorithm (e.g., Maekawa's algorithm, Suzuki-Kasami's broadcast algorithm) and explain its working principle and advantages in distributed systems.
- 20. Discuss the issues associated with deadlock detection in distributed systems. How can deadlock handling strategies mitigate these issues?

## EIGHTH SEMESTER (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

## CSC8EJ403- Social Network Analysis

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define the following terms in the context of social network analysis:
  - a. Node
  - b. Edge
  - c. Degree
- 2. Explain the significance of social network structure in understanding social dynamics.
- 3. What are the challenges associated with analyzing social network streams?
- 4. Briefly discuss the concept of random walks on graphs and its relevance in social network analysis.
- 5. How do proximity measures contribute to link prediction in social networks?
- 6. Define community structure in the context of social networks. What are some statistical techniques used to discover communities?
- 7. Discuss the importance of incorporating content information in community discovery for heterogeneous networks.
- 8. Describe the Katz score and its application in link prediction.
- 9. Differentiate between directed and undirected networks. Provide examples of each.
- 10. How does SimRank contribute to understanding network similarity? Provide a brief explanation.

#### Section B

- 11. Explain the process of evaluating datasets in social network analysis. What are some common evaluation metrics used?
- 12. Discuss the role of graph theoretic measures in semi-supervised learning.
- 13. Describe the Markov Clustering algorithm and its application in community detection.
- 14. How can random walk-based measures be utilized for clustering in social networks?
- 15. Compare and contrast feature-based link prediction with Bayesian probabilistic models.

- 16. Discuss the application of link prediction techniques in discovering new connections in social networks.
- 17. Explain the concept of social influence analysis. How can it be applied in recommendation systems?
- **18.** Analyze the challenges associated with community discovery in dynamic networks. Provide potential solutions.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 = 10 \text{ Marks})$ 

- 19. Choose a specific online social network platform (e.g., Facebook, Twitter) and describe how social network analysis techniques can be applied to understand its structure, connectivity patterns, and influence dynamics.
- 20. Select a real-world scenario (e.g., marketing campaign, information propagation) and propose a comprehensive approach using social network analysis techniques to optimize outcomes and enhance understanding

## **Model Question Papers/ Electives**

## FIFTH SEMESTER (ELECTIVE) (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024

## **Computer Science**

## CSC5EJ301 (1) - Mathematical and Statistical Foundations for Data Science

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

## **Section A**

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Explain the concept of vector addition with an example.
- 2. Define linear dependence and provide an example of linearly dependent and independent vectors.
- 3. What is the difference between a diagonal and an orthogonal matrix?
- 4. What is the significance of eigenvalues and eigenvectors in data analysis?
- 5. Define conditional probability and explain Bayes' rule with an example.
- 6. Differentiate between mean, median, and mode and mention their applications in data analysis.
- 7. Explain the concept of variance and how it measures the spread of data around the mean.
- 8. What is the Central Limit Theorem and what does it imply about sampling distributions?
- 9. Explain the difference between positive and negative correlation.
- 10. Briefly explain the concept of linear regression and its use in data analysis.

#### Section B

- 11. Given vectors A = [1, 2] and B = [3, 4], calculate the dot product and explain its geometric interpretation.
- 12. Find the inverse of the matrix [[2, 1], [1, 3]] (if it exists) using any method.
- 13. A coin is tossed three times. Calculate the probability of getting at least two heads using the concept of conditional probability.
- 14. A dataset contains exam scores of students. Explain how standard deviation helps in analyzing the spread of scores.
- 15. Differentiate between one-tailed and two-tailed hypothesis tests and provide an example for each.
- 16. A sample of 20 students has an average height of 165 cm with a standard deviation of 5 cm. Construct a 95% confidence interval for the population mean height.
- 17. Explain the concept of sampling distribution and its importance in hypothesis testing.

**18.** You are analyzing customer purchase data for an online store. Explain how Principal Component Analysis (PCA) can help in reducing data dimensionality.

## **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. A company collects data on customer age and purchase amount. You are required to perform a linear regression analysis using a spreadsheet to understand the relationship between age and purchase amount. Describe the steps involved in the analysis and how you would interpret the results.
- 20. A research team is studying the effect of different fertilizers on plant growth. Explain how they can use ANOVA to compare the mean growth rates of plants under different fertilizer conditions using a spreadsheet.

## **Computer Science**

## CSC5EJ302(1) - Exploratory Data Analysis

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Explain the importance of data visualization for business intelligence and decision making.
- 2. Differentiate between nominal and ordinal data attributes. Give an example for each.
- 3. Briefly describe the following types of charts and plots: a. Line Chart b. Bar Chart c. Pie Chart
- 4. Which visualization technique would be most suitable for representing the relationship between student age and exam scores? Justify your answer.
- 5. What category of visualization does a histogram belong to? Briefly explain its application.
- 6. State two advantages of using scatter plots for data analysis.
- 7. Differentiate between continuous and discrete data. Provide an example for each.
- 8. Briefly explain the concept of data visualization libraries in Python. List any two popular libraries.
- 9. Match the following visualizations with their applications: (a) Bar Chart (i) Showing parts of a whole (b) Histogram (ii) Comparing categories across different variables (c) Scatter Plot (iii) Visualizing distribution of data (d) Pie Chart (iv) Identifying relationships between two variables.
- 10. What is the difference between primary and secondary data?

#### **Section B**

- 11. You are given a dataset containing sales figures for different product categories across various regions. Describe the steps involved in creating a stacked bar chart to compare sales across categories for each region.
- 12. Explain how you would use a box plot to visualize the distribution of customer ages in a dataset.
- 13. Briefly describe the functionalities of Matplotlib and Seaborn libraries in Python for data visualization.
- 14. Consider a dataset with information on customer location (city, state) and their purchase history. How would you create a choropleth map to visualize spending patterns across different states?
- 15. Using an example, explain how colour palettes can be used to enhance the effectiveness of data visualizations.
- 16. Imagine you have data on stock prices for different companies over time. How would you create a line chart with annotations to highlight significant events that might have affected the stock prices?
- 17. Briefly discuss the concept of storytelling with data visualization. Why is it important?

**18.** Explain how you would use a scatter plot with a trendline to analyze the relationship between advertising expenditure and product sales.

## **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. A marketing manager has collected data on customer demographics (age, gender, location) and their purchase behavior for a new product launch. Explain how data visualization techniques can be used to analyze this data and gain valuable insights to improve the marketing strategy. Discuss the specific types of visualizations you would recommend and how they would be helpful.
- 20. A social media platform wants to understand user engagement patterns across different age groups. They have collected data on user demographics (age, location) and their activity levels (likes, comments, shares). Explain how data visualization techniques can be used to analyze this data and gain insights to improve user engagement strategies. Discuss the specific types of visualizations you would recommend and how they would be helpful.

## **Computer Science**

## CSC6EJ301(1) - Introduction to Data Warehousing and Big Data

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Define data warehousing and explain its importance in business intelligence.
- 2. Differentiate between data normalization in databases and data warehousing.
- 3. Briefly describe the three-tier architecture of a data warehouse.
- 4. Explain the difference between data warehouses and data marts.
- 5. What are the three Vs of Big Data? Briefly explain each.
- 6. State the role of cloud computing and distributed processing in Big Data management.
- 7. What are the two main types of data processed in Big Data? Give an example of each.
- 8. Briefly explain the concept of Online Analytical Processing (OLAP).
- 9. Differentiate between OLAP and OLTP operations. Provide an example for each.
- 10. What are the benefits of using dimensional modeling in data warehousing?

#### **Section B**

- 11. Explain the concept of star schema design in data warehousing. Briefly discuss its advantages and disadvantages.
- 12. Describe the concept of drill-down and roll-up operations in OLAP.
- 13. Briefly explain the functionalities of MapReduce jobs in Big Data processing.
- 14. Imagine a data warehouse stores sales data for a retail chain. Explain the ETL (Extract, Transform, Load) process involved in populating the data warehouse.
- 15. Describe the components of the Hadoop ecosystem, including HDFS, YARN, and MapReduce.
- 16. Briefly discuss the functionalities of Apache Pig and its advantages for processing big data.
- 17. Explain the role of ZooKeeper in the Hadoop ecosystem.
- **18.** Differentiate between ROLAP and MOLAP implementations of OLAP models.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. A telecommunications company wants to analyze customer call data to identify usage patterns and improve network performance. The data includes call duration, location, time of day, and customer demographics. Explain how data warehousing and big data processing can be used to achieve this objective. Discuss the relevant data warehouse architecture, ETL processes, and Big Data tools that can be employed for this purpose.
- 20. A hospital wants to analyze patient data to identify trends in disease prevalence, patient demographics, and treatment outcomes. The data includes patient records, diagnosis codes, and treatment details. Explain how a combination of data warehousing and Big Data processing can be used to achieve this objective. Discuss the relevant data warehouse architecture, ETL processes, and Big Data tools that can be employed for this purpose.

## **Computer Science**

## CSC6EJ302(1) - Advanced Python for Data Science

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Explain the difference between an array and a matrix in NumPy.
- 2. How can you perform basic arithmetic operations on NumPy arrays? Briefly explain with an example.
- 3. What is broadcasting in NumPy? Give an example to illustrate this concept.
- 4. Describe two methods for creating a Pandas Series.
- 5. How can you access specific data points within a Pandas DataFrame using indexing?
- 6. Briefly explain the concept of data cleansing in Python.
- 7. Differentiate between CSV and JSON data formats.
- 8. State two methods for importing CSV data into a Pandas DataFrame.
- 9. What are the functions used to calculate mean, median, and standard deviation in Python for data analysis?
- 10. Explain the concept of correlation in data analysis.

#### Section B

- 11. Consider a NumPy array containing student exam scores. Write Python code to:
  - Sort the scores in ascending order.
  - Find the number of students who scored above the average.
  - Create a histogram to visualize the distribution of exam scores.
- 12. Imagine you have a Pandas DataFrame containing product information (product ID, name, price). Write Python code to:
  - Calculate the average price of each product category.
  - Add a new column to the DataFrame indicating a discount percentage for each product.
  - Use pivot table functionality to analyze sales data by product category and month.
- 13. Briefly explain the functionalities of the following Python libraries for data science:
  - Scikit-learn

- Seaborn
- Beautiful Soup
- 14. Explain the steps involved in processing and cleaning a messy CSV dataset containing missing values and inconsistencies.
- 15. Consider a dataset with information on customer purchases. Write Python code to calculate the correlation coefficient between purchase amount and customer age.
- 16. Briefly describe the concept of random tensors and their creation in TensorFlow.
- 17. Explain the following tensor operations in TensorFlow:
  - Size and rank of a tensor
  - Reshaping a tensor
- **18.** Write Python code using TensorFlow to create a tensor filled with random values drawn from a normal distribution with a specific mean and standard deviation.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. A social media company wants to analyze user engagement data to understand user behavior and preferences. The data includes user demographics (age, location), platform usage details (likes, comments, shares), and post information (category, topic). Explain how you would use Python libraries like Pandas, NumPy, and TensorFlow to achieve this objective. Discuss the specific functionalities you would employ for data manipulation, exploratory data analysis, and potential machine learning applications.
- 20. An e-commerce company wants to build a recommendation system to suggest relevant products to customers based on their purchase history. Describe how Python libraries like Pandas and TensorFlow can be used to prepare the data, build a recommendation model, and evaluate its performance. Discuss the relevant data processing steps, model selection techniques, and evaluation metrics that would be used in this scenario.

## **Computer Science**

## CSC5EJ303(2) - Machine Learning Algorithms

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

[Answer All. Each question carries 3 marks] (Ceiling 24 Marks)

- 1. Briefly define supervised learning and provide an example of a supervised learning task.
- 2. Differentiate between unsupervised learning and reinforcement learning.
- 3. Explain the concept of features and labels in machine learning datasets.
- 4. What is the role of optimization algorithms in machine learning?
- 5. Briefly explain the concept of a probability distribution and its importance in machine learning.
- 6. Describe the concept of vectors and their operations (addition, subtraction) relevant to machine learning.
- 7. What is the purpose of data preprocessing in machine learning projects?
- 8. Briefly explain the difference between feature selection and feature extraction techniques.
- 9. State two common metrics used to evaluate the performance of a regression model.
- 10. Explain the difference between precision and recall in evaluating a classification model.

## Section B

- 11. Consider a dataset containing customer data and their purchase history. Describe the steps involved in data preprocessing for building a machine learning model to predict customer churn (stay vs. leave) using logistic regression.
- 12. Explain the K-Nearest Neighbors (KNN) algorithm and its advantages and disadvantages for classification tasks in Python using Scikit-learn.
- 13. Briefly describe the decision tree learning algorithm and its suitability for handling complex decision boundaries.
- 14. Imagine you have a dataset with patient medical records. Explain how feature engineering techniques can be used to improve the performance of a machine learning model for disease prediction.
- 15. Write Python code using Scikit-learn to perform K-Means clustering on a dataset containing product features. Explain what insights you can gain from the clustering results.

- 16. Briefly describe the Support Vector Machine (SVM) algorithm and its application for specific classification problems with high dimensionality.
- 17. Explain the concept of cross-validation in evaluating machine learning models. Discuss different cross-validation techniques.
- **18.** Consider a binary classification problem where you are predicting fraudulent transactions. Explain how you would use a ROC curve to analyze the performance of your machine learning model.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. A company wants to develop a machine learning model to recommend movies to users based on their past viewing history and ratings. Discuss the various steps involved in building such a recommendation system. Explain the relevant machine learning algorithms you would consider, feature engineering techniques, and evaluation metrics for this task.
- 20. An online retailer wants to predict customer demand for different products throughout the year. Describe a machine learning approach to solve this problem. Discuss the data sources, model selection process, and challenges you might encounter in building a successful forecasting model.

## **Computer Science**

## CSC5EJ304(2) - Knowledge Engineering

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Define the terms "evidence," "data," and "information." Explain the relationship between them.
- 2. Differentiate between abductive reasoning and probabilistic reasoning.
- 3. Briefly describe the Subjective Bayesian View of Probability.
- 4. What are intelligent agents, and how does mixed-initiative reasoning function?
- 5. What is an ontology in the context of knowledge engineering?
- 6. Explain the concept of a problem-solving task ontology.
- 7. Briefly discuss the development tools used in a conventional design and development scenario.
- 8. Define the terms "concept" and "instance" in relation to ontologies.
- 9. What is meant by "transitivity" in an ontology?
- 10. Briefly describe the steps involved in the ontology development methodology.

#### Section B

- 11. Explain how evidence-based reasoning can be applied in real-world scenarios with an example.
- 12. Discuss the challenges faced in agent design and development using learning technology.
- 13. Describe the process of inquiry-driven analysis and synthesis for evidence-based reasoning.
- 14. Illustrate the concept of inheritance in an ontology with a suitable example.
- 15. Explain the process of ontology matching with its significance in knowledge engineering.
- 16. Discuss the advantages and disadvantages of using a production system architecture for knowledge representation.
- 17. Explain how reduction and synthesis rules are used by an inference engine. Provide an example.
- **18.** Discuss the challenges associated with reasoning with partially learned knowledge in knowledge-based systems.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - = 10 \text{ Marks})$ 

- 19. Design an ontology for a specific domain (e.g., library management system, medical diagnosis system) clearly outlining the concepts, relationships, and attributes involved. Explain how reasoning with this ontology could be beneficial for your chosen domain.
- 20. Consider a real-world problem and propose a knowledge-based system solution. Explain how you would utilize knowledge engineering principles (e.g., ontologies, reasoning) to design and develop the system. Discuss the potential benefits and limitations of this approach.

# FIFTH SEMESTER (ELECTIVE) (CUFYUGP) DEGREE EXAMINATIONS, OCTOBER 2024 Computer Science

## CSC6EJ303(2) - Soft Computing (2024

## Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Define soft computing and discuss its historical factors influencing development.
- 2. Differentiate between soft computing, hard computing, and hybrid computing.
- 3. Explain the basic tools of soft computing and their applications.
- 4. Define fuzzy logic and its role in soft computing.
- 5. Compare and contrast fuzzy sets with crisp sets.
- 6. Discuss the properties of fuzzy relations and crisp relations.
- 7. Define tolerance and equivalence relations in the context of soft computing.
- 8. Explain the concept of fuzzy membership functions and their significance.
- 9. Describe the process of fuzzification and defuzzification.
- 10. Analyze the importance of soft computing techniques in solving real-world problems.

#### Section B

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Discuss the role of fuzzy logic concepts in real-world problem-solving. Provide examples.
- 12. Compare and contrast Mamdani and Sugeno models of fuzzy inference systems.
- 13. Explain the design and implementation of fuzzy control systems.
- 14. Describe the concepts of fuzzy clustering and fuzzy neural networks. How are they applied in practice?
- 15. Discuss the applications of genetic algorithms in solving optimization problems.
- 16. Explain the operators in genetic algorithms, including coding, selection, crossover, and mutation.
- 17. Describe the constraints encountered in genetic algorithms and strategies to handle them.
- 18. Discuss the classification of genetic algorithms and their applications in different domains.

#### **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. Choose a real-world scenario (e.g., traffic management, medical diagnosis) and propose a soft computingbased solution integrating fuzzy logic, neural networks, and genetic algorithms. Discuss the design considerations and potential benefits.
- 20. Evaluate and present a case study where soft computing techniques have been effectively applied. Discuss the problem statement, solution approach, and outcomes achieved.

## **Computer Science**

## CSC6EJ304(2) - Deep Learning

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Define the key differences between supervised and unsupervised learning.
- 2. Explain the concept of overfitting and underfitting in machine learning. How can you address these issues?
- 3. Briefly describe the role of hyperparameters in a deep learning model.
- 4. Differentiate between bias and variance in the context of machine learning models.
- 5. What is a perceptron, and how does it relate to artificial neural networks?
- 6. Explain the role of activation functions in neural networks. Provide examples of common activation functions.
- 7. Briefly describe the concept of gradient descent and its significance in training neural networks.
- 8. What is the purpose of regularization techniques in deep learning? Give two examples.
- 9. Define convolutional operations in the context of Convolutional Neural Networks (CNNs).
- 10. Briefly explain the concept of recurrent neural networks (RNNs).

#### Section B

- 11. Explain the backpropagation algorithm for training a multi-layer perceptron. Demonstrate how to calculate gradients using the chain rule.
- 12. Discuss the advantages and disadvantages of the Sigmoid and ReLU activation functions. When might you choose one over the other?
- 13. Describe the architecture of a simple feedforward neural network for image classification. Explain how data would flow through the network.
- 14. Explain the concept of pooling layers and their benefits in CNNs. Provide examples of pooling operations.
- 15. Briefly describe two different regularization techniques used to improve the generalization of deep learning models. Explain how they work.
- 16. Compare and contrast the architectures of AlexNet and VGG16 for image recognition.

- 17. Explain how Long Short-Term Memory (LSTM) networks address the vanishing gradient problem in RNNs.
- **18.** Discuss the concept of transfer learning in deep learning and its potential benefits.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. Design and implement a deep learning model for a specific real-world application (e.g., handwriting recognition, sentiment analysis, stock price prediction) using a suitable framework like TensorFlow or PyTorch. Explain your choice of architecture, hyperparameters, and training strategy.
- 20. A dataset containing medical images needs to be analyzed for disease detection. Discuss your approach to building a deep learning solution for this task. Explain the specific type of deep learning model you would choose, the pre-processing steps involved, and the evaluation metrics you would use to assess the model's performance.

## **Computer Science**

## **CSC5EJ305(3) - Cloud Computing**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Briefly define cloud computing and its historical context.
- 2. List and explain the key features of a desirable cloud computing environment.
- 3. What are the main advantages of adopting cloud computing solutions?
- 4. Differentiate between a cloud reference model and a cloud service model.
- 5. Explain the concept of a public cloud and a private cloud.
- 6. Briefly describe the characteristics of a hybrid cloud environment.
- 7. What is Infrastructure as a Service (IaaS), and what services does it typically offer?
- 8. Define Platform as a Service (PaaS) and provide examples of its applications.
- 9. Explain the concept of Software as a Service (SaaS) and its benefits for users.
- 10. Briefly discuss the open challenges associated with cloud computing adoption.

## Section B

- 11. Explain the role of virtualization in cloud computing and its core principles.
- 12. Describe the different levels of virtualization implementation (e.g., full, paravirtualization).
- 13. Compare and contrast the functionalities of a hypervisor and a container.
- 14. Discuss the advantages and disadvantages of using virtual machines in cloud environments.
- 15. Explain the concept of desktop virtualization and its potential benefits for organizations.
- 16. Briefly describe the concept of network virtualization and its role in cloud security.
- 17. Explain the core functionalities of Docker containers and their advantages over virtual machines.
- **18.** Discuss the key components of Docker, including images and repositories.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - = 10 \text{ Marks})$ 

- 19. An organization is considering migrating its IT infrastructure to the cloud. Analyze the different cloud service models (IaaS, PaaS, SaaS) and recommend the most suitable option for the organization based on their specific needs. Justify your recommendation.
- 20. Discuss the benefits and limitations of adopting a hybrid cloud model for a company. Provide a real-world example of how a hybrid cloud can be implemented for a specific business case (e.g., e-commerce, healthcare). Explore the cloud platforms available from leading industry players (e.g., Amazon Web Services, Microsoft Azure, Google Cloud Platform) and discuss the factors to consider when choosing a cloud provider.

## **Computer Science**

## CSC5EJ306(3) - Security and Privacy in Cloud

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Define the CIA triad (Confidentiality, Integrity, and Availability) in the context of cloud security.
- 2. Briefly explain the concept of encryption and decryption. Provide an example of each.
- 3. What are the key principles of secure system design?
- 4. Differentiate between conventional cryptography and public key cryptography.
- 5. Explain the role of hash functions in cloud security.
- 6. Describe the concept of digital signatures and their role in cloud security.
- 7. Briefly discuss the concept of cloud bursting and its security implications.
- 8. What is geo-tagging, and how can it be used to enhance security in the cloud?
- 9. Explain the importance of secure cloud interfaces for maintaining cloud security.
- 10. Briefly describe the concept of cloud resource access control.

## **Section B**

- 11. Discuss the various security threats and vulnerabilities specific to cloud computing environments.
- 12. Explain the concept of secure isolation strategies in cloud security. Provide examples of such strategies.
- 13. How do data retention, detection, and archiving procedures contribute to cloud security?
- 14. Describe the concept of Role-Based Access Control (RBAC) and its benefits for access control in the cloud.
- 15. Explain the concept of multi-factor authentication and its role in enhancing cloud security.
- 16. Briefly describe the functionalities of Identity Providers (IdPs) and Service Consumers in access control.
- 17. Discuss the importance of OS hardening and minimization for cloud security.
- **18.** Explain how intrusion detection and prevention systems (IDS/IPS) contribute to cloud security.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. A company is planning to migrate its sensitive financial data to the cloud. Analyze the potential security risks associated with this move. Discuss various cloud security design patterns (e.g., secure isolation, data encryption) that can be implemented to mitigate these risks. You can use spreadsheets to visualize the data and access control mechanisms.
- 20. A cloud-based e-commerce platform needs to implement robust access control mechanisms for its customers and administrators. Discuss how various access control options (e.g., RBAC, multi-factor authentication) can be combined to achieve a secure and user-friendly access control system. Explore additional security measures (e.g., data encryption, intrusion detection) that can be implemented to protect user data and system integrity within the cloud infrastructure. You can use spreadsheets to illustrate the access control framework.

## **Computer Science**

## CSC6EJ305(3) - Storage Technologies

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Explain the evolution of storage architecture, highlighting its major milestones.
- 2. Define Direct-Attached Storage (DAS) and its key characteristics.
- 3. Differentiate between Network-Attached Storage (NAS) and Storage Area Network (SAN).
- 4. What are the characteristics of Cloud storage? Explain.
- 5. Discuss the features and benefits of RAID technology.
- 6. How does RAID impact disk performance? Explain with examples.
- 7. Define Storage Provisioning. What are its types?
- 8. Describe the components of an Intelligent Storage System.
- 9. Explain the concept of block-based storage system.
- 10. What are the different deployment models of Cloud services? Briefly explain each.

## Section B

- 11. Discuss the role of Virtualization in Storage Area Networks (SAN).
- 12. Explain the components and architecture of a Fibre Channel Storage Area Network (FC SAN).
- 13. Describe the backup purpose and considerations in detail.
- 14. Discuss the various backup methods and their suitability for different scenarios.
- 15. How does backup granularity affect recovery operations? Explain with examples.
- 16. Analyze the importance of backup and recovery mechanisms in the context of storage technologies.
- 17. Discuss the impact of Cloud storage architectures on modern data center infrastructure.
- 18. Compare and contrast the features of different RAID levels.

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. a) Evaluate the need for backup and recovery mechanisms in storage technologies. Provide examples to support your answer.
- 20. (b) Discuss the security needs and management requirements for storage technologies. How can these be effectively addressed in modern storage architectures?

## **Computer Science**

## CSC6EJ306(3) - Virtualization

#### (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Define virtualization and explain its significance in modern computing.
- 2. Discuss the need for virtualization, highlighting its advantages and limitations.
- 3. What are the different types of hardware virtualization? Explain each with examples.
- 4. Differentiate between full virtualization, partial virtualization, and paravirtualization.
- 5. Describe the role of hypervisors in virtualization. How do they work?
- 6. List and explain the types of hypervisors commonly used in virtualization environments.
- 7. What are virtual machines? Explain the different types of virtual machines.
- 8. Discuss the business cases for server virtualization and its benefits.
- 9. Explain the concept of desktop virtualization. What are its types?
- 10. How does virtual server consolidation contribute to infrastructure optimization?

## Section B

- 11. Discuss the advantages and functions of network virtualization.
- 12. Explain VLAN-WAN architecture and its significance in network virtualization.
- 13. Analyze the risks associated with storage virtualization and methods to mitigate them.
- 14. Compare and contrast SAN, NAS, and RAID in the context of storage virtualization.
- 15. Describe the different types of server virtualization platforms available in the market.
- 16. Compare server virtualization and desktop virtualization, highlighting their differences and use cases.
- 17. Discuss the tools available for network virtualization and their functionalities.
- **18.** How does memory virtualization contribute to resource optimization in virtualized environments?

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

- 19. Explain how virtualization technologies are utilized in the context of cloud services. Discuss the benefits and challenges.
- 20. Analyze the potential risks and vulnerabilities associated with virtualization. Propose strategies to mitigate these risks effectively.

## **Computer Science**

## **CSC8EJ401- Microprocessor and its Applications**

## (2024 Admissions)

Time: Two Hours Maximum: 70 Marks

#### Section A

- 1. Define the purpose and characteristics of the 8085 microprocessor.
- 2. Discuss the architecture of the 8086 microprocessor.
- 3. Explain the differences between microprocessors and microcontrollers.
- 4. Describe the evolution of microprocessors from earlier generations to modern ones.
- 5. Differentiate between high-level, machine, and assembly languages.
- 6. Draw and label the pin diagram of the 8085 microprocessor.
- 7. Identify the addressing modes of the 8086 microprocessor.
- 8. How do data transfer and arithmetic instructions work in the 8086 instruction set?
- 9. Explain the significance of branch and loop instructions in 8086 programming.
- 10. What are assembler directives? Provide examples.

#### Section B

[Answer All. Each question carries 6 marks] (Ceiling 36 Marks)

- 11. Illustrate simple assembly language programs for the 8086 microprocessor.
- 12. Discuss the role of interrupts and interrupt service routines in the 8086 microprocessor.
- 13. Explain the functions of peripheral integrated circuits (ICs) in the context of microprocessor systems.
- 14. How are procedures and macros used in assembly language programming?
- 15. Analyze the features and characteristics of the Intel 80186 and 80286 microprocessors.
- 16. Compare the features of the Intel 80386 and 80486 microprocessors.
- 17. Discuss the advancements introduced in Pentium processors compared to their predecessors.
- 18. Explain the features and advantages of multi-core processors in modern computing.

#### **Section C**

[Answer any one. Each question carries 10 marks]  $(1 \times 1 - 10 \text{ Marks})$ 

19. Describe the features of the i series processors from Intel. How do they differ from previous generations?

20. Discuss the characteristics and applications of mobile processors. How do they address the unique requirements of mobile devices compared to traditional desktop processors?
